Cyberspace First Steps:

Cyberspace Michael Benedikt, 1991 Cyberspace a term first coined by the writer William Gibson in his award winning 1984 novel *Neuromancer* has been described as an infinite artificial world where humans navigate in information based space and as the ultimate computer human interface However one defines it the virtual reality known as cyberspace is one of the most radically innovative of computer developments These original contributions by leading thinkers in computer science architecture the visual arts philosophy anthropology and industry provide an insider's view of this new technology *Cyberspace First Steps* focuses on the theoretical and conceptual issues involved in the design use and effects of virtual environments offering fictions predictions and proposals forming a collective search for appropriate metaphors and possible structures that might provide the basis for future virtual worlds [Cyberspace Michael Benedikt, 1991](#) [Cyberspace](#), 1994 *Cyberspace* Michael Benedikt, 1992 this virtual reality is clearly both the strangest and most radically innovative of today's computer developments

Technophobia! Daniel Dinello, 2013-08-26 Techno heaven or techno hell If you believe many scientists working in the emerging fields of twenty first century technology the future is blissfully bright Initially human bodies will be perfected through genetic manipulation and the fusion of human and machine later human beings will completely shed the shackles of pain disease and even death as human minds are downloaded into death free robots whereby they can live forever in a heavenly posthuman existence In this techno utopian future humanity will be saved by the godlike power of technology If you believe the authors of science fiction however posthuman evolution marks the beginning of the end of human freedom values and identity Our dark future will be dominated by mad scientists rampaging robots killer clones and uncontrollable viruses In this timely new book Daniel Dinello examines the dramatic conflict between the techno utopia promised by real world scientists and the techno dystopia predicted by science fiction Organized into chapters devoted to robotics bionics artificial intelligence virtual reality biotechnology nanotechnology and other significant scientific advancements this book summarizes the current state of each technology while presenting corresponding reactions in science fiction Dinello draws on a rich range of material including films television books and computer games and argues that science fiction functions as a valuable corrective to technological domination countering

techno hype and reflecting the weaponized religiously rationalized profit fueled motives of such science By imaging a disastrous future of posthuman techno totalitarianism science fiction encourages us to construct ways to contain new technology and asks its audience perhaps the most important question of the twenty first century is technology out of control
