Guanylate Cyclase Rameshwar K. Sharma, 2002-03-31 From somewhat enigmatic beginnings 40 years ago guanylate cyclase research has emerged to occupy a position of prominence in the study of signal transduction Guanylate cyclase has several intriguing features including existence in two major forms membrane and soluble each independently regulated by distinct mechanisms The membrane form gives rise to a fascinating signal transduction story important to both peptide hormones and sensory neurons This volume covers the evolution of the field peptide hormone receptor work membrane guanylate cycles related retinal diseases and the biochemistry and physiology of the soluble form The 16 chapters are written by leaders in the field

Mechanisms of Lymphocyte Activation and Immune Regulation Sudhir Gupta, William E. Paul, Anthony Fauci, 2013-11-11 During the past 5 years rapid progress has been made in the understanding of biochemical pathways for signal transduction in lymphocyte activation Gene cloning technology has been instrumental in defining and making available in pure form of a number of growth and differentiation factors in the characterization of their receptors and in the delineation of genes for the T cell receptor This book is divided into 6 sections Section 1 deals with the molecular structure of the T cell receptor Section 2 discusses the role of the T cell receptor membrane ion channels and biochemical pathways of signal transduction in T cell activation The molecular structures and biological and immunological effects of interleukin 1 interleukin 2 and interleukin 3 are presented in Section 3 This section also details the structure of interleukin 2 receptor and its use as a target for therapy for certain leukemias Section 4 includes the biochemical events which occur following the delivery of the signal for B cell activation proliferation and differentiation by antigen growth differentiation factors The molecular structure of B cell stimulating factors is also discussed The role of oncogene expression in cellular activation and differentiation is included in Section 5 The cellular and molecular basis of natural killing and the molecular basis of cyclosporin A mediated immunosuppression are discussed in detail in Section 6 We hope this book will serve as a reference work on basic mechanisms of lymphocyte activation proliferation and differentiation for immunologists and molecular biologists
