**Sir Cyril Burt, Psychologist and "the Essential Man"** Caven S. McLoughlin, 1984      Cyril Burt Nicholas John Mackintosh, 1995

When Sir Cyril Burt died in 1971 he was widely recognized as Britain's most eminent educational psychologist whose studies of gifted and delinquent children contributions to the development of factor analysis and research on the inheritance of intelligence brought widespread acclaim. Within five years of his death however he was publicly denounced as a fraud who had fabricated data to conclude that intelligence is genetically determined. Examiners of the published data found serious inconsistencies that raised questions about their authenticity. The case has divided the scientific community ever since. Were the charges justified or was he a victim of critics fearful of validating such a politically unacceptable scientific theory. This is an up to date and unbiased analysis of one of the most notorious scandals in science now more timely and widely discussed than ever with the publication of *The Bell Curve* the best selling polemic that raises arguments comparable to Burt's. The distinguished contributors examine the controversial areas of Burt's work and argue that his defenders have sometimes but by no means always been correct and that his critics have often jumped to hasty conclusions. In their haste however these critics have missed crucial evidence that is not easily reconciled with Burt's total innocence leaving the perception that both cases are seriously flawed. An introductory chapter lays the background to the case followed by an examination of Burt's work that relates to the controversy. The book concludes with a chapter on Burt's character other cases of apparent scientific fraud and the impact of Burt's alleged fabrications. These findings have profound implications not only for the study of psychology but for the wider issues relating to integrity in scientific research and the impact of intelligence testing on social policy.

The Burt Affair Robert B. Joynson, 2025-03-03

Few reputations had undergone so dramatic a reversal as that of the late Sir Cyril Burt. When he died in 1971 he was widely acclaimed as a founding father of British psychology and a commanding figure in the world of education. His decline began when it was alleged some five years later that he had fraudulently invented much of his most influential data on the inheritance of intelligence. The dispute which followed is one of the great causes célèbres of psychology. Originally published in 1989 Robert B. Joynson took a penetrating new look at the Burt Affair examining in detail the grounds on which Burt had been accused. He concluded that the accusations were ill founded and that Burt must be exonerated. Dr Joynson's conclusions raised wider issues for psychology itself. How did such accusations come to be made and how did they come to be so widely accepted. Joynson believed that the episode pointed to inherent weaknesses and limitations in the discipline of psychology itself.

**The Cattell Controversy** William H. Tucker, 2010-10-01

Raymond Cattell the father of personality trait measurement was one of the most influential psychologists in the twentieth century the author of fifty six books more than five hundred journal articles and book chapters and some thirty standardized instruments for assessing personality and intelligence in a

professional career that spanned almost seventy years In August 1997 the American Psychological Association announced that Cattell had been selected the recipient of the American Psychological Foundation Gold Medal Award for Life Achievement in Psychological Science Then only two days before the scheduled ceremony the APF abruptly postponed the presentation of the award due to concerns involving Cattell s views on racial segregation and eugenics In addition to his mainstream research Cattell had also authored a series of publications that posited evolutionary progress as the ultimate goal of human existence and argued that scientifically measurable criteria should be used to distinguish successful from failing racial groups so that the latter might be gradually phased out by non violent methods such as regulation of birth control Derived from science Cattell s evolutionary philosophy was intended to be the basis of a full blown religion Although the earliest of these works had been published in the 1930s near the end of an era in which eugenically based policies for human improvement were much more acceptable Cattell promoted similar ideas well into the 1980s and 90s The Cattell Controversy describes Cattell s socio religious beliefs in detail and analyzes their relationship to his scientific contributions William H Tucker discusses the controversy that arose within the field in response to the award s postponement after which Cattell withdrew his name from consideration for the award but insisted that his position had been distorted by taking statements out of context Reflecting on these events Tucker concludes with a discussion of the complex question of whether and how a scientist s ideological views should ever be a relevant factor in determining the value of his or her contributions to the field
