**Blackie's Concise English Dictionary** Blackie, Concise English Dictionary *Introduction to Computing Using Python* Ljubomir Perkovic, 2015-04-20 Perkovic's *Introduction to Computing Using Python: An Application Development Focus* 2nd Edition is more than just an introduction to programming. It is an inclusive introduction to Computer Science that takes the pedagogical approach of the right tool for the job at the right moment and focuses on application development. The approach is hands-on and problem-oriented with practice problems and solutions appearing throughout the text. The text is imperative first but does not shy away from discussing objects early where appropriate. Discussions of user-defined classes and Object-Oriented Programming appear later in the text when students have more background and concepts can be motivated. Chapters include an introduction to problem-solving techniques and classical algorithms, problem-solving and programming, and ways to apply core skills to application development. This edition also includes examples and practice problems provided within a greater variety of domains. It also includes case studies integrated into additional chapters providing students with real-life applications using the concepts and tools covered in the chapters.

*AMAZON STOCK PRICE: VISUALIZATION, FORECASTING, AND PREDICTION USING MACHINE LEARNING WITH PYTHON GUI* Vivian Siahaan, Rismon Hasiholan Sianipar, 2023-06-09 Amazon is an American multinational technology company that is known for its e-commerce, cloud computing, digital streaming, and artificial intelligence services. It was founded by Jeff Bezos in 1994 and is headquartered in Seattle, Washington. Amazon's primary business is its online marketplace where it offers a wide range of products including books, electronics, household items, and more. The company has expanded its operations to various countries and is one of the largest online retailers globally. In addition to its e-commerce business, Amazon has ventured into other areas. It provides cloud computing services through Amazon Web Services (AWS), which offers on-demand computing, power, storage, and other services to individuals, businesses, and governments. AWS has become a significant revenue source for Amazon. Amazon has also made a significant impact on the entertainment industry. It operates Amazon Prime Video, a streaming platform that offers a wide selection of movies, TV shows, and original content. As for Amazon's stock price, it has experienced substantial growth since the company went public in 1997. The stock has been highly valued by investors due to Amazon's consistent revenue growth, market dominance, and innovation. The stock price has seen both ups and downs over the years, reflecting market trends and investor sentiment. The dataset used in this project starts from 14 May 1997 and is updated till 27 Oct 2021. It contains 6155 rows and 7 columns. The columns in the dataset are Date, Open, High, Low, Close, Adj Close, and Volume. In this project, you will involve technical indicators such as daily returns, Moving Average, Convergence Divergence, MACD, Relative Strength Index, RSI, Simple Moving

Average SMA lower and upper bands and standard deviation To perform forecasting based on regression on Adj Close price of Amazon stock price you will use Linear Regression Random Forest regression Decision Tree regression Support Vector Machine regression Na ve Bayes regression K Nearest Neighbor regression Adaboost regression Gradient Boosting regression Extreme Gradient Boosting regression Light Gradient Boosting regression Catboost regression MLP regression Lasso regression and Ridge regression The machine learning models used predict Amazon stock daily returns as target variable are K Nearest Neighbor classifier Random Forest classifier Naive Bayes classifier Logistic Regression classifier Decision Tree classifier Support Vector Machine classifier LGBM classifier Gradient Boosting classifier XGB classifier MLP classifier and Extra Trees classifier Finally you will develop GUI to plot boundary decision distribution of features feature importance predicted values versus true values confusion matrix learning curve performance of the model and scalability of the model

WIND POWER ANALYSIS AND FORECASTING USING MACHINE LEARNING WITH PYTHON Vivian Siahaan,Rismon Hasiholan Sianipar,2023-07-09 In this project on wind power analysis and forecasting using machine learning with Python we started by exploring the dataset We examined the available features and the target variable which is the active power generated by wind turbines The dataset likely contained information about various meteorological parameters and the corresponding active power measurements To begin our analysis we focused on the regression task of predicting the active power using regression algorithms We split the dataset into training and testing sets and preprocessed the data by handling missing values and performing feature scaling The preprocessing step ensured that the data was suitable for training machine learning models Next we trained several regression models on the preprocessed data We utilized algorithms such as Linear Regression Decision Tree Regression Random Forest Regression and Gradient Boosting Regression Each model was trained on the training set and evaluated on the testing set using performance metrics like mean squared error MSE and R squared score After obtaining regression models for active power prediction we shifted our focus to predicting categorized active power using machine learning models This involved converting the continuous active power values into discrete categories or classes We defined categories based on certain thresholds or ranges of active power values For the categorized active power prediction task we employed classification algorithms Similar to the regression task we split the dataset preprocessed the data and trained various classification models Common classification algorithms used were Logistic Regression Support Vector Machines SVM K Nearest Neighbors KNN Decision Trees Random Forests Gradient Boosting Extreme Gradient Boosting Multi Layer Perceptron and Light Gradient Boosting models During the training and evaluation of classification models we used performance metrics like accuracy precision recall and F1 score to assess the models predictive capabilities Additionally we analyzed the classification reports to gain insights into the models performance for each category Throughout the process we paid attention to feature scaling techniques such as normalization and standardization These techniques were applied to ensure that the features were on a similar scale and to prevent any

bias or dominance of certain features during model training The results of predicting categorized active power using machine learning models were highly encouraging The models demonstrated exceptional accuracy and exhibited strong classification performance across all categories The findings from this analysis have significant implications for wind power forecasting and monitoring systems allowing for more effective categorization and management of wind power generation based on predicted active power levels To summarize the wind power analysis and forecasting session involved dataset exploration active power regression using regression algorithms and predicting categorized active power using various machine learning models The regression task aimed to predict continuous active power values while the classification task aimed to predict discrete categories of active power Preprocessing training evaluation and performance analysis were key steps throughout the session The selected models algorithms and performance metrics varied depending on the specific task at hand Overall the project provided a comprehensive overview of applying machine learning techniques to analyze and forecast wind power generation
