MacGillivray, Timothy E. Glass, Colin Raston, 2017 Comprehensive Supramolecular Chemistry II George W. Gokel, Len Barbour, 2017-06-22 Comprehensive Supramolecular Chemistry II Second Edition Nine Volume Set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic inorganic and physical chemistry with some biological influence The original edition was structured to reflect in part the origin of the field However in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition experimental and computational methods in supramolecular chemistry supramolecular receptors dynamic supramolecular chemistry supramolecular engineering crystallographic engineered assemblies sensors imaging agents devices and the latest in nanotechnology Each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field Each article begins with outlining basic concepts before moving on to more advanced material Contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers Focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine nanotechnology and medicinal chemistry Fully rewritten to make a completely up to date reference work that covers all the major advances that have taken place since the First Edition published in 1996 *Comprehensive Supramolecular Chemistry II* Jerry L. volume an effort has been made to organize and present a comprehensive overview of receptors for cationic guests This begins with reviews of the various basic complexing systems podands crown ethers lariat ethers cryptands and spherands Natural cation binding agents are also important hosts in supramolecular chemistry and their chemistry has been extensively studied The structural aspects of complexation by natural hosts and crown ethers are reviewed separately and the topic is addressed for specific receptor systems within chapters dedicated to specific hosts The physical chemistry of complexation and transport is reviewed along with the important application of anion activation sometimes called phase transfer catalysis In the second dozen or so chapters are presented overviews of specialized areas such as the formation of alkalides the development of chemical sensors chromoionophores and redox switchable receptors The volume concludes with discussions of transition metal complexes of macrocyclic ligands second sphere coordination complexes of organometallics and finally of fullerenes

Comprehensive Supramolecular Chemistry Jerry L. Atwood, Multiple Contributors, 1996-07-30 Comprehensive Supramolecular Chemistry covers for the first time in eleven detailed volumes the exciting inter and multidisciplinary area of modern supramolecular chemistry This subject which has now reached an astonishing diversity and complexity has developed at a remarkably rapid pace following the initial discoveries of crown ethers and cryptands in the late sixties The numerous references including many recent citations constitute an unrivalled in depth source for direct entry to the widespread primary literature on any aspect of this most highly topical area The many carefully selected illustrations and instructive schematic representations make the chapters easily readable

Comprehensive Supramolecular Chemistry D.N. Reinhoudt, 1999-04-02 In this last volume of the set a state of the art overview of future supramolecular technology and its current applications is given but without attempting to cover all possible emerging new technologies In the first part of this volume Chapters 1-6 separation technologies based on selective molecular recognition are dealt with The transduction of a chemical recognition phenomenon into a measurable signal is discussed in Chapters 7-10 The next section covers the area of supramolecular reactivity The design of molecules that will fit the transition state of a chemical reaction is one of the major challenges in supramolecular chemistry This stabilization leads to catalysis Related to this topic are the contents of Chapters 12-14 where the activation of reactive anions by complexation of the cation phase transfer catalysis and the storage of reagents are reviewed Medical applications such as drug delivery from or imaging and targeting by supramolecular systems are described in Chapters 16 and 17 The last part of this volume covers different material properties ranging from inclusion polymerization to nonlinear optical materials Comprehensive Supramolecular Chemistry Fritz Vögtle, 1996 This second volume containing 18 chapters is devoted to the design synthesis and complexing ability for molecular guest substances of the presently known synthetic host compounds Uncharged organic molecules cations and anions are the targets to be selectively complexed imprisoned transported and extracted The first chapters provide a more general introduction into macrocycle synthesis and well known examples of complementary host guest structures as well as into the supramolecular binding types The following chapters consequently give detailed insight into the hitherto known synthetic receptor substances of all kinds including crown compounds calixarenes carcerands siderophores etc and their selective interaction with fitting molecular guest substrates This volume contains many structural and host guest illustrations including coloured illustrations and also refers to other volumes of this series with regard to for example template synthesis catenanes analytical applications etc *Comprehensive Supramolecular Chemistry* Jerry L.
