

including the use of chippers for cleaning brass on ship shells and bottoms. Another common use for the lighter chippers and caulking tools is the removal of rough scale and old paint on steel bridges and other structures (Fig. 144). Light chippers are also found in welding plants for removing excess metal and weld splash.

Riveting Hammers

Heavy riveting hammers (Fig. 146) are used principally for driving large hot steel rivets up to $1\frac{1}{2}$ inches in diameter in structural steel work, shipyards, railroad work, boiler shops, etc. They are also used for driving cold steel rivets of smaller size.

Jam Riveters are specialized heavy riveters having a built-in air cylinder for holding the riveting hammer against the rivet. One throttle valve controls the hammer and the holding cylinder.

A Combination Jam Riveter or a Hammer Holder-on is merely a Jam Riveter having separate throttles for controlling the hammer and the holding cylinder.
