Courant Computer Science Randall Rustin,1973-04-01   New Computational Paradigms Barry S. Cooper,Benedikt Löwe,2005-05-20 This book constitutes the refereed proceedings of the first International Conference on Computability in Europe CiE 2005 held in Amsterdam The Netherlands in June 2005 The 68 revised full papers presented were carefully reviewed and selected from 144 submissions Among them are papers corresponding to two tutorials six plenary talks and papers of six special sessions involving mathematical logic and computer science at the same time as offering the methodological foundations for models of computation The papers address many aspects of computability in Europe with a special focus on new computational paradigms These include first of all connections between computation and physical systems e g quantum and analog computation neural nets molecular computation but also cover new perspectives on models of computation arising from basic research in mathematical logic and theoretical computer science   **Computational Complexity** R. Rustin,1973   **The Making of a New Science** Giorgio Ausiello,2018-08-06 This book explains the development of theoretical computer science in its early stages specifically from 1965 to 1990 The author is among the pioneers of theoretical computer science and he guides the reader through the early stages of development of this new discipline He explains the origins of the field arising from disciplines such as logic mathematics and electronics and he describes the evolution of the key principles of computing in strands such as computability algorithms and programming But mainly it s a story about people pioneers with diverse backgrounds and characters came together to overcome philosophical and institutional challenges and build a community They collaborated on research efforts they established schools and conferences they developed the first related university courses they taught generations of future researchers and practitioners and they set up the key publications to communicate and archive their knowledge The book is a fascinating insight into the field as it existed and evolved it will be valuable reading for anyone interested in the history of computing

Respondek,2025-02-26 The ambition of this monograph is to show the methods of constructing fast matrix multiplication algorithms and their applications in an intelligible way accessible not only to mathematicians The scope and coverage of the book are comprehensive and constructive and the analyses and algorithms can be readily applied by readers from various disciplines of science and technology who need modern tools and techniques related to fast matrix multiplication and related problems and techniques Authors start from commutative algorithms through exact non commutative algorithms partial algorithms to disjoint and

arbitrary precision algorithms Authors explain how to adapt disjoint algorithms to a single matrix multiplication and prove the famous tau theorem in the not so special case In an appendix authors show how to work with confluent Vandermonde matrices since they are used as an auxiliary tool in problems arising in fast matrix multiplication Importantly each algorithm is demonstrated by a concrete example of a decent dimensionality to ensure that all the mechanisms of the algorithms are illustrated Finally authors give a series of applications of fast matrix multiplication algorithms in linear algebra and other types of problems including artificial intelligence   People & Ideas in Theoretical Computer Science Cristian Calude,1999 This book collects personal accounts and reflections of fourteen eminent scientists who have dedicated themselves to the craft of theoretical computer science Contributions focus on the authors specific interests experiences and reminiscences The emerging picture which is just one among many should be a catalyst for further developments and continuations

Economics and Computation Jörg Rothe,2015-08-18 This textbook connects three vibrant areas at the interface between economics and computer science algorithmic game theory computational social choice and fair division It thus offers an interdisciplinary treatment of collective decision making from an economic and computational perspective Part I introduces to algorithmic game theory focusing on both noncooperative and cooperative game theory Part II introduces to computational social choice focusing on both preference aggregation voting and judgment aggregation Part III introduces to fair division focusing on the division of both a single divisible resource cake cutting and multiple indivisible and unshareable resources multiagent resource allocation In all these parts much weight is given to the algorithmic and complexity theoretic aspects of problems arising in these areas and the interconnections between the three parts are of central interest
