Computational Intelligence, 2003 Computational Intelligence David B. Fogel, Charles J. Robinson, 2003-06-16 The definitive survey of computational intelligence from luminaries in the field Computational intelligence is a fast moving multidisciplinary field the nexus of diverse technical interest areas that include neural networks fuzzy logic and evolutionary computation Keeping up with computational intelligence means understanding how it relates to an ever expanding range of applications This is the book that ties it all together and puts that understanding well within your reach In *Computational Intelligence The Experts Speak* editors David B Fogel and Charles J Robinson present an unmatched compilation of expanded papers from plenary and special lecturers attending the 2002 IEEE World Congress on Computational Intelligence Collectively these papers provide a compelling snapshot of the issues that define the industry as observed by some of the top minds in the computational intelligence community In a series of topical chapters this comprehensive volume shows how current technology is shaping computational intelligence and it delivers eye opening insights into the field s future challenges The research detailed here covers an array of leading edge applications from coevolutionary robotics to underwater sensors and cognitive science in such areas as Self organizing systems Situation awareness Human machine interaction Automatic control Data recognition Computational Intelligence also includes introductions to each grouping of contributions that provide helpful tutorials and discuss important parallels between topics Whatever your role might be in this dynamic influential field this is the one reference that no practitioner of computational intelligence should be without

Computational Intelligence: A Compendium John Fulcher, L. C. Jain, 2008-06-16 *Computational Intelligence A Compendium* presents a well structured overview about this rapidly growing field with contributions of leading experts in Computational Intelligence The main focus of the compendium is on applied methods tried and proven effective to realworld problems which is especially useful for practitioners researchers students and also newcomers to the field The 25 chapters are grouped into the following themes I Overview and Background II Data Preprocessing and Systems Integration III Artificial Intelligence IV Logic and Reasoning V Ontology VI Agents VII Fuzzy Systems VIII Artificial Neural Networks IX Evolutionary Approaches X DNA and Immune based Computing **Fundamentals of Computational Intelligence** James M. Keller, Derong Liu, David B. Fogel, 2016-07-12 Provides an in depth and even treatment of the three pillars of computational intelligence and how they relate to one another This book covers the three fundamental topics that form the basis of computational intelligence neural networks fuzzy systems and evolutionary computation The text focuses on inspiration design theory and practical aspects of implementing procedures to solve real world problems While other books in the three fields that comprise computational intelligence are written by specialists in one discipline this book is co written by current former Editor in Chief of IEEE Transactions on Neural Networks and Learning Systems a former Editor in Chief of IEEE Transactions on Fuzzy Systems and the founding Editor in Chief of IEEE Transactions on Evolutionary Computation The

coverage across the three topics is both uniform and consistent in style and notation Discusses single layer and multilayer neural networks radial basis function networks and recurrent neural networks Covers fuzzy set theory fuzzy relations fuzzy logic interference fuzzy clustering and classification fuzzy measures and fuzzy integrals Examines evolutionary optimization evolutionary learning and problem solving and collective intelligence Includes end of chapter practice problems that will help readers apply methods and techniques to real world problems Fundamentals of Computational intelligence is written for advanced undergraduates graduate students and practitioners in electrical and computer engineering computer science and other engineering disciplines

Computational Intelligence in Bioinformatics Gary B. Fogel, David W. Corne, Yi Pan, 2007-11-26 Combining biology computer science mathematics and statistics the field of bioinformatics has become a hot new discipline with profound impacts on all aspects of biology and industrial application Now Computational Intelligence in Bioinformatics offers an introduction to the topic covering the most relevant and popular CI methods while also encouraging the implementation of these methods to readers research

Computational Intelligence and Feature Selection Richard Jensen, Qiang Shen, 2008-10-03 The rough and fuzzy set approaches presented here open up many new frontiers for continued research and development Computational Intelligence and Feature Selection provides readers with the background and fundamental ideas behind Feature Selection FS with an emphasis on techniques based on rough and fuzzy sets For readers who are less familiar with the subject the book begins with an introduction to fuzzy set theory and fuzzy rough set theory Building on this foundation the book provides A critical review of FS methods with particular emphasis on their current limitations Program files implementing major algorithms together with the necessary instructions and datasets available on a related Web site Coverage of the background and fundamental ideas behind FS A systematic presentation of the leading methods reviewed in a consistent algorithmic framework Real world applications with worked examples that illustrate the power and efficacy of the FS approaches covered An investigation of the associated areas of FS including rule induction and clustering methods using hybridizations of fuzzy and rough set theories Computational Intelligence and Feature Selection is an ideal resource for advanced undergraduates postgraduates researchers and professional engineers However its straightforward presentation of the underlying concepts makes the book meaningful to specialists and nonspecialists alike

Knowledge, Skill and Artificial Intelligence Bo Göranzon, Ingela Josefson, 2012-12-06 Issues raised by the Theory of Knowledge a central theme in the development of Artificial Intelligence are the main topic of this book The major questions are How is the expert s knowledge to be elicited what are the limits and possibilities How can skill be developed and maintained in a more and more computerized and abstract working life This last question is also closely related to the discussion on programs for education and training in society and working life Long term effects on skill formation in working life in relation to new technology are a very important area of research Case studies form the basis for philosophical reflections with the main concept of tacit knowledge as the central issue of skill and new technology To a great extent the

discussion is based on current case studies of professional groups with experience in advanced computer technology The contributions of this book demonstrate the complicated nature of human knowledge They introduce different theoretical perspectives on the issue of knowledge acquisition and elicitation

Handbook on Artificial Intelligence and Expert Systems in Law Enforcement Edward C. Ratledge, Joan E. Jacoby, 1989-09-26 As the complexities and problems that plague law enforcement agencies continue to proliferate the need to utilize every available tool has led to the application of expert systems to law enforcement activities This first book to explore this application is both practical and conceptually clear as it explains the potential utility of expert systems and their impact on operations and management Such systems can support command and control through computer aided dispatching assist in the solution of high volume crimes such as residential burglaries aid in the design of programs for the apprehension and prosecution of career criminals and repeat offenders upgrade personnel through enhanced training programs and provide an improved method for the delivery of technical assistance and training services Until now literature to assist organizations that could benefit from this technology has been scarce Ratledge and Jacoby have geared their discussions to a wide audience which includes both practitioners and the academic community This handbook offers clear systematic explanations of the applications of expert systems in the world of law enforcement It discusses the impact of these systems on traditional ways of policing and crime solving and details a set of practical guidelines for jurisdictions considering the use of expert systems The text is designed to present information in an order that progresses from general to technical aspects of the subject The first two chapters provide an overview of expert systems as they apply to different law enforcement areas and discuss the policy issues they create The next section describes practical applications of expert systems in computer aided dispatching crime solving and training Chapter 4 explains the basic steps in building expert systems its terminology and general characteristics Chapter 5 offers an introduction to artificial intelligence and its uses in problem solving and expert systems Written with the expert systems designer or data processing manager in mind Chapter 6 reviews the problems encountered in linking inferencing to data processing and the efficiencies and technical requirements of the system In Chapter 7 a case study of the Baltimore County Police Department s expert system for residential burglaries is presented and the steps taken in the development of that system are described Included in the valuable appendices are a list of vendors two bibliographies including an annotated one relating to current policing issues and one dealing with technical publications and a glossary This timely handbook will enable practitioners in criminal justice to make informed decisions regarding the implementation of expert systems It also provides up to the minute information for computer system
