## **Computational Approaches To Language Acquisition Cognition Special Issue:**

*Computational Approaches to Language Acquisition* Michael R. Brent, 1997 The past fifteen years have seen great changes in the field of language acquisition New experimental methods have yielded insights into the linguistic knowledge of ever younger children and interest has grown in the phonological syntactic and semantic aspects of the lexicon Computational investigations of language acquisition have also changed reflecting among other things the profound shift in the field of natural language processing from hand crafted grammars to grammars that are learned automatically from samples of naturally occurring language Each of the four research papers in this book takes a novel formal approach to a particular problem in language acquisition In the first paper J M Siskind looks at developmentally inspired models of word learning In the second M R Brent and T A Cartwright look at how children could discover the sounds of words given that word boundaries are not marked by any acoustic analog of the spaces between written words In the third P Resnik measures the association between verbs and the semantic categories of their arguments that children likely use as clues to verb meanings Finally P Niyogi and R C Berwick address the setting of syntactic parameters such as headedness for example whether the direct object comes before or after the verb

**Languages: From Formal to Natural** Orna Grumberg, Michael Kaminski, Shmuel Katz, Shuly Wintner, 2009-05-22 This Festschrift volume published in honor of Nissim Francez on the occasion of his 65th birthday contains 15 papers written by friends and colleagues many of whom congregated at a celebratory symposium held on May 2009 in Haifa Israel

**Object Recognition in Man, Monkey, and Machine** Michael J. Tarr, Heinrich H. Bulthoff, 1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative neuroscientific cognitive and computational scientists in the field Cassandra Moore and Patrick Cavanagh take a classic demonstration the perception of two tone images and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes Michael J Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes Melvyn A Goodale and G Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects D I Perrett M W Oram and E Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition
