Computed Tomography In Intracranial Tumo

Computed Tomography In Intracranial Tumo:

Computed Tomography in Intracranial Tumors G.B. Bradac, E. Kazner, U. Büll, S. Wende, R. Fahlbusch, Th. Grumme, W. Lanksch, O. Stochdorph, K. Kretzschmar, W. Meese, J. Schramm, H. Steinhoff, 2012-12-06 The current book represents a distillation of the experience gained in diagnosis of intracranial tumors with computed X ray tomography at the University Hospitals of Berlin Mainz and München To what purpose Standard radiological techniques such as pneumoencephalography with lumbar puncture and cerebral arteriography with puncture of the common carotid artery are invasive procedures which entail a certain amount of risk as well as discomfort for the patient Furthermore diagnoses made with these procedures rely primarily on indirect signs of an intracranial space occupying lesion such as displacement of the air filled ventricles or of normal cerebral vessels Only a few types of tumor are demonstrated directly with these techniques In contrast computed tomography demonstrates the pathology directly in almost all cases and this with a minimum of risk and discomfort In addition normal intracranial structures are demonstrated so that the tumor's effect on its surroundings can be evaluated Today almost a decade after HOUNSFIELD'S revolutionary invention diagnosis of brain tumors without computed tomography is almost unthinkable if not in fact irresponsible

Computed Tomography and Magnetic Resonance Tomography of Intracranial Tumors C. Claussen, R. Fahlbusch, R. Felix, T. Grumme, J. Heinzerling, J.R. Iglesias-Rozas, E. Kazner, K. Kretzschmar, M. Laniado, W. Lanksch, W. Müller-Forell, T.H. Newton, W. Schörner, G. Schroth, B. Schulz, O. Stochdorph, G. Sze, S. Wende, 2012-12-06 This book represents the second fully revised edition of the original volume published in 1982 Experience in neuroradiology has confirmed the outstanding value of computed tomography CT for the diagnosis of space occupying lesions within the skull and orbit It might be assumed then that the second edition of this book would simply represent a numerically expanded continuation of the popular first edition That is not the case however Advances in imaging techniques have prompted the creation of a new book whose expanded title reflects its more comprehensive nature The added illustrations the revised text and the expanded circle of editors and contributors document this Since publication of the first edition a new modality magnetic resonance imaging MRI has become an established neuroradiologic study We felt it was essential to include this new modality in our book and explore its capabilities as an adjunct or alternative to CT scanning Because of the high acquisition costs of MRI and the still small number of MR units currently in operation we have relied in part on images furnished by other institutions and private practitioners to whom we are indebted Many problems relating to MR both in terms of equipment and image interpretation have yet to be resolved There is no denying that we still have much to learn

Computerized Tomography Brain Metabolism Spinal Injuries W. Driesen, Mario Brock, M. Klinger, 2012-12-06 W. DRIESEN This volume contains the original text of 60 papers delivered at the 32nd Annual Meeting of the German Society for Neurosurgery held in Tübingen 22nd to 25th April 1981 They represent a selection from 91 papers submitted a third of which had to be excluded on critical analysis This was deemed necessary on

account of costs and in order to keep the volume of a size and standard usually achieved within the last few years Three main subjects were considered 1 changes in methods of investigation and treatment of neurosurgical conditions brought about by the use of computerised axial tomography C A T scanning 2 papers dealing with fundamental research concerned with normal and abnormal cerebral metabolism 3 trauma to the vertebral column and spinal cord and its sequelae and 4 free communications The organisers of this meeting tried in contradistinction to previous custom to shift the emphasis away from highlighting major communications and so to remain true to their intention to allow experts in their fields to introduce their subjects and pin point problems to which subsequent speakers could then address them selves in detail in their own papers In my view this did occur in a meaningful way although not to perfection a goal always difficult to attain
