

Motion 1: Lines, Curves

This part introduces basic techniques for creating motion with code.

A deep understanding of motion and how to use it to communicate guides the art of the animator, director, and filmmaker. Practitioners of the media arts use complex motion to everything from dynamic websites to video games. The most fundamental component of motion is time, or more precisely, how elements change over time. Static images can communicate motion (think of Impressionist and Futurist paintings), and time-based media such as video, film, and software can express it directly. Defining motion through code displays the power and flexibility of the medium.

Controlling motion

To put a shape into motion, use a variable to change its attributes. We have already presented a few simple programs that move a shape across the screen (pp. 124–125). If clearing the screen before every frame is desired, remember to use the `background()` function at the beginning of the `draw()`. As mentioned in Structure 1 (p. 104), the `frameRate()` function may be used to control the number of frames drawn to the screen each second.

```
float y = 50.0;  
float speed = 1.0;  
float radius = 15.0;
```

```
void setup() {  
  size(100, 100);  
  smooth();  
  rectMode(CORNER);  
  ellipseMode(CENTER);  
}
```

```
void draw() {  
  background(0);  
  ellipse(x, y, radius, radius);  
  y = y + speed;  
  if (y > height-radius) {  
    y = -radius;  
  }  
}
```
