Computer-oriented mathematics Ladis D. Kovach, 1969 *Fundamentals of Numerical Computation (Computer-Oriented Numerical Analysis)* G. Alefeld, R. Grigorieff, 2012-12-06 **Intelligent Computer Mathematics** Jacques Carette, Lucas Dixon, Claudio Sacerdoti Coen, Stephen Watt, 2009-07-06

As computers and communications technology advance greater opportunities arise for intelligent mathematical computation. While computer algebra, automated deduction and mathematical publishing each have long and successful histories we are now seeing increasing opportunities for synergy among them. The Conferences on Intelligent Computer Mathematics (cicm) 2009 is a collection of co-located meetings allowing researchers and practitioners active in these related areas to share recent results and identify the next challenges. The specific areas of the cicm conferences and workshops are described below but the unifying theme is the computerized handling of mathematical knowledge. The successful formalization of much of mathematics as well as a better understanding of its internal structure makes mathematical knowledge in many ways more tractable than general knowledge as traditionally treated in artificial intelligence. Similarly we can also expect the problem of effectively using mathematical knowledge in automated ways to be much more tractable. This is the goal of the work in the cicm conferences and workshops. In the long view solving the problems addressed by cicm is an important milestone in formulating the next generation of mathematical software.

Computer Oriented Mathematics National Council of Teachers of Mathematics, 1965 *Computer Oriented Mathematics* National Council of Teachers of Mathematics, 1963 **Computer-Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools** Costabile, Francesco Aldo, Altomare, Mariavittoria, Tricoli, Gianluca, 2020-08-07

The theme of inserting new digital technologies into the teaching and learning of mathematics from primary and secondary schools has provoked a wide and interesting debate. One such debate is the reformation of the foundations of mathematics to include computation: what and how to calculate among the traditional themes: Arithmetic, Geometry, etc. of mathematics. Thus the authors propose the MatCos Project as a new approach for solving this issue. *Computer Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools* is a critical reference source that proposes a new pedagogical learning paradigm that guides students in the formation of an active, logical, sequential, intuitive and creative thinking that directs them towards problem solving and starts students with computational thinking and programming in a natural way. The content of the book is divided into two parts: the first exploring theoretical and pedagogical notes on mathematics and the second examining the MatCos programming environment and its systematic inclusion in teaching practice. Highlighting themes that include computer-assisted instruction, teaching learning sequences and programming, this book is ideal for in-service teachers, mathematics instructors, academicians, researchers and students.
