**Numerical Computation Using C** Robert Glassey,1993-01-01 As many in the scientific community move from FORTRAN toward C there is a need for books to make this transition smooth and effective This book was written by a mathematician to address the need for such a reference and focuses on C from a mathematical perspective No prior knowledge of C is assumed and the troublesome areas such as pointers arrays and dynamic memory allocation are thoroughly covered This book is intended to be a guide for learning C through numerical analysis and will serve as a supplemental text in numerical analysis numerical methods scientific computing or computational mathematics courses

**Numerical Recipes** William T. Vetterling,William H. Press,1992-11-27 These example books published as part of the Numerical Recipes Second Edition series are source programs that demonstrate all of the Numerical Recipes subroutines Each example program contains comments and is prefaced by a short description of how it functions The books consist of all the material from the original edition as well as new material from the Second Edition They will be valuable for readers who wish to incorporate procedures and subroutines into their own source programs They are available in Fortran C and C

*Scientific Computing with MATLAB and Octave* Alfio Quarteroni,Fausto Saleri,Paola Gervasio,2010-05-30 Preface to the First Edition This textbook is an introduction to Scientific Computing We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil We will show how to compute the zeros or the integrals of continuous functions solve linear systems approximate functions by polynomials and construct accurate approximations for the solution of differential equations With this aim in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers vectors and matrices In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion We will gradually discover its principal commands statements and constructs We will show how to execute all the algorithms that we introduce throughout the book This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability accuracy and complexity We will solve several problems that will be raised through exercises and examples often stemming from scientific applications
