Digital Image Processing and Analysis Scott E. Umbaugh, 2010-11-19 Whether for computer evaluation of otherworldly terrain or the latest high definition 3D blockbuster digital image processing involves the acquisition, analysis, and processing of visual information by computer and requires a unique skill set that has yet to be defined in a single text. Until now, taking an applications-oriented engineering approach, *Digital Image Processing and Analysis* provides the tools for developing and advancing computer and human vision applications and brings image processing and analysis together into a unified framework. Providing information and background in a logical, as-needed fashion, the author presents topics as they become necessary for understanding the practical imaging model under study. He offers a conceptual presentation of the material for a solid understanding of complex topics and discusses the theory and foundations of digital image processing and the algorithm development needed to advance the field. With liberal use of color throughout and more materials on the processing of color images than the previous edition, this book provides supplementary exercises, a new chapter on applications, and two major new tools that allow for batch processing, the analysis of imaging algorithms, and the overall research and development of imaging applications. It includes two new software tools: the Computer Vision and Image Processing Algorithm Test and Analysis Tool (CVIP-ATAT) and the CVIP Feature Extraction and Pattern Classification Tool (CVIP-FEPC). Divided into five major sections, this book provides the concepts and models required to analyze digital images and develop computer vision and human-computer applications, as well as all the necessary information to use the CVIPtools environment for algorithm development, making it an ideal reference tool for this fast-growing field.

Computer Vision and Image Processing

Manas Kamal Bhuyan, 2019-11-05 The book familiarizes readers with fundamental concepts and issues related to computer vision and major approaches that address them. The focus of the book is on image acquisition and image formation models, radiometric models of image formation, image formation in the camera, image processing concepts, concept of feature extraction and feature selection for pattern classification, recognition, and advanced concepts like object classification, object tracking, image-based rendering, and image registration. Intended to be a companion to a typical teaching course on computer vision, the book takes a problem-solving approach.

Computer Vision: Theory and Industrial Applications

Carme Torras, 2012-12-06 This book is the fruit of a very long and elaborate process. It was conceived as a comprehensive solution to several deficiencies encountered while trying to teach the essentials of Computer Vision in different contexts to technicians from industry looking for technological solutions to some of their problems, to students in search of a good subject for a PhD

thesis and to researchers in other fields who believe that Computer Vision techniques may help them to analyse their results. The book was carefully planned with all these people in mind. Thus it covers the fundamentals of both 2D and 3D Computer Vision and their most widespread industrial applications such as automated inspection, robot guidance and workpiece acquisition. The level of explanation is that of an expanded introductory text in the sense that besides the basic material, some special advanced topics are included in each chapter together with an extensive bibliography for experts to follow up. Well known researchers on each of the topics were appointed to write a chapter following several guidelines to ensure a consistent presentation throughout. I would like to thank the authors for their patience because some of them had to go through several revisions of their chapters in order to avoid repetition and to improve the homogeneity and coherence of the book. I hope they will find that the final result has been worth their efforts.

Image Algebra and Morphological Image Processing II Paul D. Gader, Edward R. Dougherty, 1991 **Computer Vision for X-Ray Testing** Domingo Mery, 2015-07-24

Features: introduces the mathematical background for monocular and multiple view geometry; describes the main techniques for image processing used in X ray testing; presents a range of different representations for X ray images explaining how these enable new features to be extracted from the original image; examines a range of known X ray image classifiers and classification strategies; discusses some basic concepts for the simulation of X ray images and presents simple geometric and imaging models that can be used in the simulation; reviews a variety of applications for X ray testing from industrial inspection and baggage screening to the quality control of natural products; provides supporting material at an associated website including a database of X ray images and a Matlab toolbox for use with the book's many examples.

Image Algebra and Morphological Image Processing, 1991 *Artificial Intelligence Applications in Engineering* Richard Kendall Miller, Terri C. Walker, 1988 **Book Review Index**, 2004 Every 3rd issue is a quarterly cumulation IEEE

Workshop on Visualization and Machine Vision, 1994 **Recent Advances in Computer Vision** Mahmoud Hassaballah, Khalid M. Hosny, 2018-12-14 This book presents a collection of high quality research by leading experts in computer vision and its applications. Each of the 16 chapters can be read independently and discusses the principles of a specific topic; reviews up to date techniques; presents outcomes and highlights the challenges and future directions. As such the book explores the latest trends in fashion, creative processes, facial features detection, visual odometry, transfer learning, face recognition, feature description, plankton and scene classification, video face alignment, video searching and object segmentation. It is intended for postgraduate students, researchers, scholars and developers who are interested in computer vision and connected research disciplines and is also suitable for senior undergraduate students who are taking advanced courses in related topics.
