Computer Architecture A First Course:

Computer Architecture Roy Dowsing, Frank Woodhams, 1985 Computer architecture Roy D. Dowsing, 1985 **A First Course in Scientific Computing** Rubin Landau, 2011-10-30 This book offers a new approach to introductory scientific computing. It aims to make students comfortable using computers to do science, to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers, and to show how all the pieces can work together. Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems, from energy use to the building of skyscrapers to projectile motion with drag. He is attentive to how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract. Landau covers the basics of computation, numerical analysis, and programming from a computational science perspective. The first part of the printed book uses the problem-solving environment Maple as its context, with the same material covered on the accompanying CD as both Maple and Mathematica programs; the second part uses the compiled language Java with equivalent materials in Fortran90 on the CD, and the final part presents an introduction to LaTeX replete with sample files. Providing the essentials of computing with practical examples, *A First Course in Scientific Computing* adheres to the principle that science and engineering students learn computation best while sitting in front of a computer, book in hand, in trial and error mode. Not only is it an invaluable learning text and an essential reference for students of mathematics, engineering, physics, and other sciences, but it is also a consummate model for future textbooks in computational science and engineering courses. A broad spectrum of computing tools and examples that can be used throughout an academic career. Practical computing aimed at solving realistic problems. Both symbolic and numerical computations. A multidisciplinary approach: science, math, computer science. Maple and Java in the book itself; Mathematica, Fortran90, Maple, and Java on the accompanying CD in an interactive workbook format. A First Course in Computer Programming Using PASCAL Arthur M. Keller, 1982 **A First Course in the Numerical Analysis of Differential Equations** A. Iserles, 2009 lead the reader to a theoretical understanding of the subject without neglecting its practical aspects. The outcome is a textbook that is mathematically honest and rigorous and provides its target audience with a wide range of skills in both ordinary and partial differential equations.
