Multidimensional Pharmacochemistry Peter Mager, 1984 Multidimensional Pharmacochemistry Design of Safer Drugs deals with techniques based on the theory of simultaneous statistical inference and the qualitative rules that can be applied in solving problems of high toxicity This book points out that the multidimensional view of data analysis can be applied to solve problems in medicinal chemistry Investigators use different approaches a certain procedure can prove to be the most beneficial for a specific drug design This text presents the theoretical assumptions that mathematicians make to derive the basis for their multivariate techniques This book also describes in nonmathematical terms a set of methods that are valuable as well as explain the different designs by using numerical examples According to E J Ariens drug action involves the pharmaceutical pharmacokinetic toxokinetic and pharmacodynamics toxodynamic phases The multivariate structure activity analysis MASCA Model of Pharmacochemistry is a highly unified multivariate approach to drug design To develop a multidimensionally oriented pharmacology the book notes that the investigator can use the dynamic structure activity analysis This entails the experimentalist and chemist using quantitative approaches and intuitive elements from a small

number of compounds toward larger groups with successive changes being inputted in the desired biological activity This book is strongly recommended for toxicologists pharmacologists applied mathematicians medicinal and agricultural chemists
