G. Scott Owen, 1997 *Rendering Techniques '99* Dani Lischinski, Greg W. Larson, 2012-12-06 This book contains the proceedings of the 10th Eurographics Workshop on Rendering which took place from the 21st to the 23rd of June 1999 in Granada Spain Originally an outgrowth of the annual Eurographics meeting the workshop was organized by a dedicated group of researchers who felt there was insufficient opportunity at Eurographics and Siggraph to exchange ideas specifically on rendering Over the past 9 years the workshop has become renowned as an international watershed for top quality work in this field attracting between 50 and 100 attendees each year to share their latest research This year we received a total of 63 submissions Each paper was carefully reviewed by two of the 25 international programme committee members as well as two external reviewers selected by the co chairs from a pool of 71 individuals The programme committee and external reviewers are listed following the contents pages In this new review process all submissions and reviews were handled electronically with the exception of videos submitted with a few of the papers This streamlined the review process considerably while reducing the costs and confusion associated with courier delivery of hundreds of papers **Rendering Techniques '98** George Drettakis, Nelson Max, 2012-12-06 Some of the best current research on realistic rendering is included in this volume It emphasizes the current hot topics in this field image based rendering and efficient local and global illumination calculations In the first of these areas there are several contributions on real world model acquisition and display on using image based techniques for illumination and on efficient ways to parameterize and compress images or light fields as well as on clever uses of texture and compositing hardware to achieve image warping and 3D surface textures In global and local illumination there are contributions on extending the techniques beyond diffuse reflections to include specular and more general angle dependent reflection functions on efficiently representing and approximating these reflection functions on representing light sources and on approximating visibility and shadows Finally there are two contributions on how to use knowledge about human perception to concentrate the work of accurate rendering only where it will be noticed and a survey of computer graphics techniques used in the production of a feature length computer animated film with full 3D characters *SIGGRAPH 1996 Conference Proceedings*. the past 10 years the Workshop has become the premier forum dedicated to research in rendering Much of the work in rendering now appearing in other conferences and journals builds on ideas originally presented at the Workshop This year we received a total of 84 submissions Each paper was carefully reviewed by two of the 25 international programme committee members as well as external reviewers selected by the co chairs from a pool of 121 individuals The programme committee and external reviewers are listed following the contents pages In this review process all submissions and reviews were handled electronically with the exception of videos submitted with a few of the papers however some mpeg movies were also sent electronically The overall quality of the submissions was exceptionally high Space and time constraints forced the committee to make some difficult decisions In the end 33 papers were accepted and they appear here Almost all papers are accompanied by color images which appear at the end of the book The papers treat the following varied topics radiosity ray tracing methods for global illumination visibility reflectance filtering perception hardware assisted methods real time rendering modeling for efficient rendering and new image representations
