Computer Vision Beyond The Visible Spectrum:

Computer Vision Beyond the Visible Spectrum Bir Bhanu, Ioannis Pavlidis, 2006-03-30 Recently there has been a dramatic increase in the use of sensors in the non visible bands As a result there is a need for existing computer vision methods and algorithms to be adapted for use with non visible sensors or for the development of completely new methods and systems Computer Vision Beyond the Visible Spectrum is the first book to bring together state of the art work in this area It presents new pioneering research across the electromagnetic spectrum in the military commercial and medical domains By providing a detailed examination of each of these areas it focuses on the development of state of the art algorithms and looks at how they can be used to solve existing new challenges within computer vision Essential reading for academics industrial researchers working in the area of computer vision image processing and medical imaging it will also be useful background reading for advanced undergraduate postgraduate students

Sappa,Riad I. Hammoud,2022-06-01 Human visual perception is limited to the visual optical spectrum Machine vision is not Cameras sensitive to the different infrared spectra can enhance the abilities of autonomous systems and visually perceive the environment in a holistic way Relevant scene content can be made visible especially in situations where sensors of other modalities face issues like a visual optical camera that needs a source of illumination As a consequence not only human mistakes can be avoided by increasing the level of automation but also machine induced errors can be reduced that for example could make a self driving car crash into a pedestrian under difficult illumination conditions Furthermore multi spectral sensor systems with infrared imagery as one modality are a rich source of information and can provably increase the robustness of many autonomous systems Applications that can benefit from utilizing infrared imagery range from robotics to automotive and from biometrics to surveillance In this book we provide a brief yet concise introduction to the current state of the art of computer vision and machine learning in the infrared spectrum Based on various popular computer vision tasks such as image enhancement object detection or object tracking we first motivate each task starting from established literature in the visual optical spectrum Then we discuss the differences between processing images and videos in the visual optical spectrum and the various infrared spectra An overview of the current literature is provided together with an outlook for each task Furthermore available and annotated public datasets and common evaluation methods and metrics are presented In a separate chapter popular applications that can greatly benefit from the use of infrared imagery as a data source are presented and discussed Among them are automatic target recognition video surveillance or biometrics including face recognition Finally we conclude with recommendations for well fitting sensor setups and data processing algorithms for certain computer vision tasks We address this book to prospective researchers and engineers new to the field but also to anyone who wants to get introduced to the challenges and the approaches of computer vision using infrared images or videos Readers will be able to start their work directly after reading the book supported by a highly comprehensive backlog of recent and relevant literature as well as related infrared datasets including existing evaluation frameworks Together with consistently decreasing costs for infrared cameras new fields of application appear and make computer vision in the infrared spectrum a great opportunity to face nowadays scientific and engineering challenges [Machine Vision Beyond Visible Spectrum](#) Riad Hammoud,Guoliang Fan,Robert W.
