Computeraided Tolerancing:

Computer-aided Tolerancing Fumihiko Kimura,2012-12-06 Theory and practice of tolerances are very important for designing and manufacturing engineering artifacts on a rational basis Tolerance specifies a degree of discrepancy between an idealized object and its physical realization Such discrepancy inevitably comes into our product realization processes because of practical cost consideration or our inability to fully control manufacturing processes Major product and production characteristics which are affected by tolerances are product quality and cost For achieving high precision machines tight tolerance specification is necessary but this will normally increase product cost In order to optimally compromise the conflicting requirements of quality and cost it is essential to take into account of the total product life cycle throughout product planning design manufacturing maintenance and recycling For example in order to construct durable products under severe working conditions low sensitivity of product functionality with respect to tolerances is required In future re use of components or parts will become important and tolerance synthesis with respect to this aspect will be an interesting future research topics

Models for Computer Aided Tolerancing in Design and Manufacturing Joseph K. Davidson,2007-05-19 The contents of this book originate from a collection of selected papers presented at the 9th CIRP International Seminar on CAT held in April 2005 at Arizona State University USA The CIRP plans this seminar every two years and the book is one in a series of Proceedings on CAT It contains 33 papers by experts from around the world on subjects that range from theoretical models to practical applications

ElMaraghy,2012-12-06 The importance of proper geometric dimensioning and tolerancing as a means of expressing the designer's functional intent and controlling the inevitable geometric and dimensional variations of mechanical parts and assemblies is becoming well recognized The research efforts and innovations in the field of tolerancing design the development of supporting tools techniques and algorithms and the significant advances in computing software and hardware all have contributed to its recognition as a viable area of serious scholarly contributions The field of tolerancing design is successfully making the transition to maturity where deeper insights and sound theories are being developed to offer explanations and reliable implementations are introduced to provide solutions Machine designers realized very early that manufacturing processes do not produce the nominal dimensions of designed parts The notion of associating a lower and an upper limit referred to as tolerances with each dimension was introduced Tolerances were specified to ensure the proper function of mating features Fits of mating features included clearances location fits and interference fits with various sub grades in each category assigned a tolerance value depending on the nominal size of the mating features During the inspection process a part is rejected if a dimension fell outside the specified range As the accuracy requirements in assemblies became tighter designers had to consider other critical dimensions and allocate tolerances to them in order to ensure the assembly's functionality **Improving Computer Aided Tolerancing by Using Feature Technology** Christian Weber,Oliver Thome,Werner Britten,2008 **Computer Aided Tolerancing for Plastic Product Design** Keng Soon Ting,1996 **Computer-aided Tolerancing** Øyvind Bjørke,1989 Computer Aided Tolerancing presents a unified method for tolerance calculations developed by the author as well as an interactive computer system by which these calculations can be performed It is a professional reference book for manufacturing engineers in industry It can also be used as a textbook for advanced undergraduate and graduate level students Contents include Formulation of the Problem Simple Tolerance chains Process Parameters Manufacturing Principles Tolerance Control and Distribution Compound Chain Links and Computer Aids Computer Aided Tolerance Analysis Andres V. challenge for the cost effective manufacture of complex micro products The ability to manufacture customizable micro products that can be delivered in variable volumes within relatively short timescales is very much dependent on the level of development of the micro assembly processes positioning alignment and measurement techniques gripping and feeding approaches and devices Micro assembly has developed rapidly over the last few years and all the predictions are that it will remain a critical technology for high value products in a number of key sectors such as healthcare communications defence and aerospace The key challenge is to match the significant technological developments with a new generation of micro products that will establish firmly micro assembly as a mature manufacturing process
