**Computerization Viewed as Organizational Technology** Nancy Hoerle Carter, 1981

**Information Technology and the Corporation of the 1990s** Thomas J. Allen, Michael S. Scott Morton, 1994-01-06

One of the most pathbreaking and influential business books of the 1990s is *The Corporation of the 1990s* by Michael Scott Morton. Its expert view of how information technology would influence organizations and their ability to survive and prosper in the 1990s has become the benchmark of thinking about information technology. Now in a supporting companion volume *Information Technology and the Corporation of the 1990s* makes available the research on which *The Corporation of the 1990s* was based. The research was conducted at the Sloan School of Management at MIT by the Management in the 1990s program. The program was funded by a group of 12 industrial and government sponsors from the United States and Britain which included American Express, Digital Equipment Corporation, Eastman Kodak, British Petroleum, MCI Communications, General Motors, U S Army, ICL Ltd, Internal Revenue Service, Ernst Young, BellSouth, and CIGNA Corporation. *Information Technology and the Corporation of the 1990s* aims to disseminate ideas on how organizations can manage the impact of information technology and also to raise issues and stimulate further thought by both academics and professionals. The book is divided into three sections which cover the information technology revolution, strategic options, and organization and management responses. It incorporates the work of many important scholars including Charles Jonscher, Michael J. Piore, Thomas W. Malone, JoAnne Yates, Robert I. Benjamin, Gary W. Loveman, Eric von Hippel, Edgar H. Schein, Stanley M. Besen, Garth Saloner, N. Venkatraman, Akbar Zaheer, John C. Henderson, Jay C. Coopridge, Kevin Crowston, Jeongsuk Koh, Gordon Walker, Laura Poppo, John S. Carroll, Constance Perin, Brian T. Pentland, John Chalykoff, Lotte Bailyn, D. Eleanor Westney, Sumantra Ghoshal, John D. C. Little, Thomas J. Allen, Oscar Hauptman, Lisa M. Handbook of Human-Computer Interaction M.G. Helander, 2014-06-28

This Handbook is concerned with principles of human factors engineering for design of the human computer interface. It has both academic and practical purposes; it summarizes the research and provides recommendations for how the information can be used by designers of computer systems. The articles are written primarily for the professional from another discipline who is seeking an understanding of human computer interaction and secondarily as a reference book for the professional in the area and should particularly serve the following: computer scientists, human factors engineers, designers, and design engineers, cognitive scientists, and experimental psychologists, systems engineers, managers, and executives working with systems development. The work consists of 52 chapters by 73 authors and is organized into seven sections. In the first section, the cognitive and information processing aspects of HCI are summarized. The following group of papers deals with design principles for software and hardware. The third section is devoted to differences in performance between different users and computer-aided training and principles for design of effective manuals. The next part presents

important applications text editors and systems for information retrieval as well as issues in computer aided engineering drawing and design and robotics The fifth section introduces methods for designing the user interface The following section examines those issues in the AI field that are currently of greatest interest to designers and human factors specialists including such problems as natural language interface and methods for knowledge acquisition The last section includes social aspects in computer usage the impact on work organizations and work at home

JOURNAL OF MANAGEMENT, 1992

Intellectual Teamwork Jolene Galegher, Robert E. Kraut, Carmen Egido, 2014-01-14 This book seeks to establish an interdisciplinary applied social scientific model for researchers and students that advocates a cooperative effort between machines and people After showing that basic research on social processes offers much needed guidance for those creating technology and designing tools for group work its papers demonstrate the mutual relevance of social science and information system design and encourage better integration of these disciplines This comprehensive collection closely examines the variety of electronic tools being deployed to solve traditional problems in communication and coordination Unfortunately research shows that these tools have not been as successful as their designers had envisioned partially because they were not always produced with the needs and goals of their human users in mind The editors goal is to entice more social scientists to orient their research around questions of practical interest to information system designers and to convince designers to search for the knowledge about social and organizational behavior that would make their tools more useful
