Computers And The Environment:

Computers and the Environment: Understanding and Managing their Impacts R. Kuehr, Eric Williams, 2003-10-31 Personal computers have made life convenient in many ways but what about their impacts on the environment due to production use and disposal Manufacturing computers requires prodigious quantities of fossil fuels toxic chemicals and water Rapid improvements in performance mean we often buy a new machine every 1 3 years which adds up to mountains of waste computers How should societies respond to manage these environmental impacts This volume addresses the environmental impacts and management of computers through a set of analyses on issues ranging from environmental assessment technologies for recycling consumer behaviour strategies of computer manufacturing firms and government policies One conclusion is that extending the lifespan of computers e g through reselling is an environmentally and economically effective strategy that deserves more attention from governments firms and the general public

Service Computing: Concept, Method and Technology Zhaohui Wu, 2014-12-06 Service computing is a cross disciplinary field that covers science and technology and represents a promising direction for distributed computing and software development methodologies It aims to bridge the gap between business services and IT services by supporting the whole lifecycle of services innovation Over the last ten years applications in industry and academic research have produced considerable progress and success Service Computing Concept Method and Technology presents the concept of service computing and a proposed reference architecture for service computing research before proceeding to introduce two underlying technologies Web services and service oriented architecture It also presents the authors latest research findings on hot topics such as service discovery recommendation composition verification service trust dynamic configuration and big data service Some new models and methods are proposed including three service discovery methods based on semantics and skyline technologies two service recommendation methods using graph mining and QoS prediction two service composition methods with graph planning and one service verification method using p calculus and so on Moreover this book introduces JTang an underlying platform supporting service computing which is a product of the authors last ten years of research and development Systematically reviews all the research on service computing Introduces state of art research works on service computing and provides a road map for future directions Bridges the gap between service computing theory and practice Provides guidance for both industry and academia

Network and Parallel Computing Chen Ding, Zhiyuan Shao, Ran Zheng, 2010-08-30 This book constitutes the refereed proceedings of the IFIP International Conference NPC 2010 held in Zhengzhou China in September 2010 The 39 papers presented were carefully selected from 89 submissions The papers are organized in topical sections on Parallelization and Optimization Parallel Algorithms Network CPU and Multicore Cloud and Grid Infrastructure Network on Chip

CLOUD COMPUTING Suryaprakash Nalluri, Kiran Kandagiri, Hemalatha Kandagiri, 2015-12-17 Thanks to cloud computing it is now much simpler to have access to a scalable adaptable and on demand computing infrastructure for a wide

variety of uses Another important technological development is cloud computing which is already clearly changing how information technology is used and how the market is structured This book covers a wide variety of cloud computing applications and focuses on state of the art cloud computing services systems and architectures Given the explosive growth of cloud computing technologies platforms and services this Handbook may become the de facto standard reference for anybody involved in the field whether they are researchers scientists programmers engineers or users The book s intended audience includes researchers practitioners educators engineers academics designers and graduate students Anyone interested in investing starting their own business or managing a company could learn something from this book The term cloud computing is still relatively unfamiliar Despite the many resources available most people still lack a thorough understanding of what cloud computing entails I think this is often true even of the authors themselves One reason for this is that most published works on cloud computing are created from a technical point of view rather than a user s There is also the marketing jargon that various businesses have coined to hawk their cloud computing services Therefore there is a great deal of confusion This is a common reaction whenever a new piece of technology is introduced especially if it promises to bring about a radical shift in the status quo Considering this this book s primary objective is to help you see beyond the hype and into the potential rewards of cloud computing This book will help you understand cloud computing from the user s perspective covering when and why to utilize cloud services how to choose a cloud provider how to combine cloud and on premises IT and best practices in cloud computing The main purpose of this book is to provide concepts that will better prepare you to make your own decisions about such offerings but if care is not taken it can easily become an advertisement for various cloud service providers Furthermore some vendors are here today and gone tomorrow as is the nature of the fast paced technology industry This is not a technical book at all This book is intended for a general readership rather than a technical one yet any technical expert would benefit from reading it to better understand the far reaching effects of cloud computing Cloud computing and centralized related technologies are not assumed in this book s content Before we continue however it would be helpful if you read the book s introductory chapter so that we can talk about cloud computing using the same language This information will be useful in the next chapters

Architecting Secure Software Systems Asoke K. Talukder, Manish Chaitanya, 2008-12-17 Traditionally software engineers have defined security as a non functional requirement As such all too often it is only considered as an afterthought making software applications and services vulnerable to attacks With the phenomenal growth in cybercrime it has become imperative that security be an integral part of software engineering so tha

The Use of Computers in Radiation Therapy I. A. D. Bruinvis, 1987 Hardbound Since the first conference in 1966 there has been an enormous change qualitatively as well as quantitatively in the application of computers in the field of radiotherapy The fast technical development has made applications possible that only a few people dreamed of two decades ago There is now hardly any field in radiotherapy where computers have no task This book is a collection of papers dealing with all aspects of the use of computers in radiation therapy It contains contributions by the majority of international scientists working in this field and thus presents a fair account of the state of the art It is felt that a useful application of computers in radiotherapy is only possible by close cooperation of all disciplines involved New applications of computer software and hardware on the computation imaging process control and quality assurance of radiation treatments are discussed as are new developments in radiation dose calculation *Defense White Paper*, 1992 **The Logic Design of Transistor Digital Computers** Gerald A. Maley, John Earle, 1963 **Green Computing And Power Management** Ajit Singh, 2021-02-12 Green computing is the study and practice of minimizing the environmental impact of computer system and related resources effectively and eco friendly It is an emerging concept towards reducing the hazardous material and save our environment from the harmful impacts of the computer CPU servers and other electronic devices Green computing is basically concerned with the Computers when they are manufactured used and disposed with no side effect on environment Use of computer plays a vital role in our environment pollution In this era 70 percent of energy is consumed by our computers which are not in properly used and is still turned on and that consumed energy is main reason of co2 emission So now there is a big need to save our environment and live a healthy life Power efficiency of use and manufacture are design issues To recycle computers they must be manufactured to facilitate recycling To fully enable reduced power consumption the components must be designed to consume power proportional to the amount of useful work done Computer technology can be used to facility energy efficiency in other areas For example telecommuting could save huge amounts of fuel Also

using software to power manage buildings has proven significant savings CMOS CPU power usage can be calculated by the number of transistors that switch Because of scaling static power consumption is a significant problem which represent wasted power Reducing power in data centers must address the cooling issue Running systems at higher temperatures increases energy costs and reduces reliability Data centers which can avoid active cooling or use more efficient sources of power are able to reduce the total power consumed The book covers theory of Introduction to Green Computing Reducing the IT Footprint Computing Technology for Energy Efficiency of other Physical Systems and Major Green Initiatives
