**Making IT Better** National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Computer Science and Telecommunications Board, Committee on Information Technology Research in a Competitive World, 2000-11-05. The flood of information technology (IT) products and services entering the marketplace often obscures the need to nurture the research enterprise. But as IT becomes integrated into all aspects of society, the need for research is even greater. And the range of issues that need to be addressed is broader than ever. This new book highlights the fundamental importance of research to ensure that IT meets society's expanding needs. Against the background of dramatic change in the IT landscape, the committee examines four key questions: Is the scope of IT research broad enough, particularly in the arena of large-scale systems to address government, business, and social applications? Are government and industrial sponsors providing sufficient funding for IT research? Is the research net big, both big and diverse enough to capture sufficient financial and intellectual resources to advance the field? Are structures and mechanisms for funding and conducting research suited to the new sets of research challenges?
