

AI vs. human intelligence: Three important differences

AI		HUMAN INTELLIGENCE
<p>May require millions or billions of samples to learn at a level exceeding average human intelligence, making humans on average more efficient learners than AI systems.</p>	<p>One-shot vs. multishot learning</p>	<p>Ability to learn new concepts and ideas from a small number of samples, sometimes from a single one. This ability is referred to as one-shot learning.</p>
<p>Ability to recite, recalling information as it was presented or generating a novel mashup of information that some refer to as imagination but is better described as synthetic recitation.</p>	<p>Imagination and recitation</p>	<p>Ability to form ideas, mental sensations and concepts of phenomena that are not present and/or do not exist is considered an important element of being human.</p>
<p>In 2023, most artificial intelligence systems do not possess multimodal learning ability. Autonomous vehicles, however, are able to receive inputs from multiple types of sources to make navigational decisions.</p>	<p>Multimodality input and output</p>	<p>Ability to receive and quickly integrate information from all of our senses and use that perception to make decisions. The average human is able to incorporate multimodal inputs and create multimodal outputs.</p>
