*Advances in Computer Science, Intelligent System and Environment*, 2012-02-23 *Trends in Intelligent Systems and Computer Engineering* Oscar Castillo, Li Xu, 2008-04-25 A large international conference Intelligent Systems and Computer Engineering was held in Hong Kong March 21 23 2007 under the International MultiConf ence of Engineers and Computer Scientists IMECS 2007 The IMECS 2007 is organized by the International Association of Engineers IAENG a nonpro t int national association for engineers and computer scientists The IMECS conferences serve as good platforms for the engineering community to meet with each other and to exchange ideas The conferences also strike a balance between theoretical and plication development The conference committees have been formed with over two hundred committee members who are mainly research center heads faculty deans department heads professors and research scientists from over thirty countries The conferences are truly international meetings with a high level of participation from many countries The

response that we have received for the multiconference is excellent. There have been more than one thousand one hundred manuscript submissions for the IMECS 2007. All submitted papers have gone through the peer review process and the overall acceptance rate is 58.46%. This volume contains revised and extended research articles on intelligent systems and computer engineering written by prominent researchers participating in the multiconference IMECS 2007. There is huge demand not only for theories but also applications for the intelligent systems and computer engineering in the society to meet the needs of rapidly developing top end high technologies and to improve the increasing high quality of life.

*Soft Computing and Intelligent Systems Design* Fakhreddine O. Karray, Clarence W. De Silva, 2004. Traditional artificial intelligence (AI) techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s. These are referred to as crisp techniques by the soft computing community. The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools. These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them. Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book. Karray and Silva will be suitable for the majority of courses which will be found at an advanced level. Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner. They present both theory and applications including industrial applications and the book contains numerous worked examples, problems and case studies. Covering the state of the art in soft computing techniques, the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate.

interested in computer science and its applications in engineering and management Computing with Words in Information/Intelligent Systems 1 Lotfi A. Zadeh, 1999-07-16 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh's fuzzy sets theory Remembering Wittgenstein's statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature *Advances in Intelligent Systems and Computing V* Natalya
