Computing Projects Differential Equations Computing And Mod:

Modeling and Simulation in Science and Mathematics Education Wallace Feurzeig, Nancy Roberts, 2012-12-06 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems. Despite their diversity, complex systems have many structural and functional features in common that can be effectively simulated using powerful user-friendly software. As a result, virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions. This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity. The books in this series will promote this revolution in systems thinking by integrating skills of numeracy and techniques of dynamic modeling into a variety of disciplines. The unifying theme across the series will be the power and simplicity of the model building process, and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them. **Modeling Dynamic Systems** does not endorse any particular modeling paradigm or software. Rather, the volumes in the series will emphasize simplicity of learning, expressive power, and the speed of execution as priorities that will facilitate deeper system understanding.

Blended Learning in Engineering Education Ataur Rahman, Vojislav Ilic, 2018-11-06 Blended Learning combines the conventional face-to-face course delivery with an online component. The synergistic effect of the two modalities has proved to be of superior didactic value to each modality on its own. The highly improved interaction it offers to students, as well as direct accessibility to the lecturer, adds to the hitherto unparalleled learning outcomes. **Blended Learning in Engineering Education: Recent Developments in Curriculum Assessment and Practice** highlights current trends in Engineering Education involving face-to-face and online curriculum delivery. This book will be especially useful to lecturers and postgraduate/undergraduate students, as well as university administrators who would like to not only get an up-to-date overview of contemporary developments in this field but also help enhance academic performance at all levels.
