Grade Models and Methods for Data Analysis Teresa Kowalczyk, Elzbieta Pleszczyńska, Frederick Ruland, 2012-12-06 This book provides a new grade methodology for intelligent data analysis It introduces a specific infrastructure of concepts needed to describe data analysis models and methods This monograph is the only book presently available covering both the theory and application of grade data analysis and therefore aiming both at

researchers students as well as applied practitioners The text is richly illustrated through examples and case studies and includes a short introduction to software implementing grade methods which can be downloaded from the editors

Multivariate Dispersion, Central Regions, and Depth Karl Mosler, 2012-12-06 This book introduces a new representation of probability measures the lift zonoid representation and demonstrates its usefulness in statistical applications The material divides into nine chapters Chapter 1 exhibits the main idea of the lift zonoid representation and surveys the principal results of later chapters without proofs Chapter 2 provides a thorough investigation into the theory of the lift zonoid All principal properties of the lift zonoid are collected here for later reference The remaining chapters present applications of the lift zonoid approach to various fields of multivariate analysis Chapter 3 introduces a family of central regions the zonoid trimmed regions by which a distribution is characterized Its sample version proves to be useful in describing data Chapter 4 is devoted to a new notion of data depth zonoid depth which has applications in data analysis as well as in inference In Chapter 5 nonparametric multivariate tests for location and scale are investigated their test statistics are based on notions of data depth including the zonoid depth Chapter 6 introduces the depth of a hyperplane and tests which are built on it Chapter 7 is about volume statistics the volume of the lift zonoid and the volumes of zonoid trimmed regions they serve as multivariate measures of dispersion and dependency Chapter 8 treats the lift zonoid order which is a stochastic order to compare distributions for their dispersion and also indices and related orderings

XploRe – Learning Guide W.

Härdle, S. Klinke, M. Müller, 2012-12-06 It is generally accepted that training in statistics must include some exposure to the mechanics of computational statistics This learning guide is intended for beginners in computer aided statistical data analysis The prerequisites for XploRe the statistical computing environment are an introductory course in statistics or mathematics The reader of this book should be familiar with basic elements of matrix algebra and the use of HTML browsers This guide is designed to help students to XploRe their data to learn via data interaction about statistical methods and to disseminate their findings via the HTML outlet The XploRe APSS Auto Pilot Support System is a powerful tool for finding the appropriate statistical technique quantlet for the data under analysis Homogeneous quantlets are combined in XploRe into quantlibs The XploRe language is intuitive and users with prior experience of other statistical programs will find it easy to reproduce the examples explained in this guide The quantlets in this guide are available on the CD ROM as well as on the Internet The statistical operations that the student is guided into range from basic one dimensional data analysis to more complicated tasks such as time series analysis multivariate graphics construction microeconometrics panel data analysis etc The guide starts with a simple data analysis of pullover sales data then introduces graphics The graphics are interactive and cover a wide range of displays of statistical data
