Symposium held at Toulouse 1982 H. Caussinus,P. Ettinger,R. Tomassone,2012-12-06 Pour le cinquieme congres de la serie
COMPSTAT 82 reunit environ 500 participants d'origines scientifiques et geographiques tres variees prouvant a l'evidence l'
interet persistant de la communaute scientifique pour tous les problemes de calculs statistiques Le Comite de Programme
charge de l'organisation scientifique du Congres etait compose de S Apelt Republique democratique d'Allemagne A Björck
Suede H Caussinus France President Y Escoufier France A de Falguerolles France Secetaire J W Frane U S A J Gordesch
Republique Federale d'Allemagne Th Havranek Tchechoslovaquie N Lauro Italie C Millier France R J Mokken pays Bas R
Tomassone France D Wishart Royaume Uni Ce Comite a decide d'augmenter le nombre des conferenciers invites cherchant
de la sorte une representation des diverses ecoles ainsi que l'introduction de nouveaux themes La tache la plus difficile a
ensuite ete de selectionner une soixantaine de contributions parmi 250 soumissions La encore le Comite de Programme s'est
efforce de favoriser des voies qui semblaient les plus nouvelles et a essaye de maintenir une bonne repartition scientifique et
geographique Cependant comme dans les precedents congres COMPSTAT il a donne la preference aux propositions
clairement marquees simultanement du double aspect Statistique et Calcul Dans bien des cas ces deux aspects sont tres lies
rendant en particulier difficile et peu pertinente toute classification fine des contributions *COMPSTAT* F. de Antoni,N.
Lauro,A. Rizzi,2012-12-06 When dealing with the design or with the application of any technical system which is not quite
simple and trivial one has to face the problem to determine the allowable deviations of the system functions and the
optimal vector of system parameter tolerances The need for the solution of this problem is stimulated with various serious
economic and maintenance aspects between them the tendency to reach the minimal production cost the maximal system
operation reliability are the most frequent Suppose that we are dealing with an system S consisting of N components
represented by the system parameters $x_i, i = 1, 2, \dots, N$ which are arranged in certain structure so that the K system functions F_k
 $k = 1, 2, \dots, K$ expressing the considered system properties fulfill the condition $F_k \in F$ where F is the set of the actual
system functions F_0 is the set of the nominal system functions and $A = \{A_k, k = 1, 2, \dots, K\}$ is the set of the allowable
system functions The set F depends besides the system structure also on the vector $X = (x_1, x_2, \dots, x_N)$ of the system
parameters Suppose that the system structure is invariant **COMPSTAT 1984** T. Havranek,Z. Sidak,M. Novak,2013-06-29

Whittaker,2013-11-11 The Role of the Computer in Statistics David Cox Nuffield College Oxford OX1 1NF U K A classification
of statistical problems via their computational demands hinges on four components I the amount and complexity of the data II

the specificity of the objectives of the analysis iii the broad aspects of the approach to analysis ill the conceptual mathematical and numerical analytic complexity of the methods Computational requirements may be limiting in I and ill either through the need for special programming effort or because of the difficulties of initial data management or because of the load of detailed analysis The implications of modern computational developments for statistical work can be illustrated in the context of the study of specific probabilistic models the development of general statistical theory the design of investigations and the analysis of empirical data While simulation is usually likely to be the most sensible way of investigating specific complex stochastic models computerized algebra has an obvious role in the more analytical work It seems likely that statistics and applied probability have made insufficient use of developments in numerical analysis associated more with classical applied mathematics in particular in the solution of large systems of ordinary and partial differential equations integral equations and integral differential equations and for the reaction of useful information from integral transforms Increasing emphasis on models incorporating specific subject matter considerations is one route to bridging the gap between statistical ana

COMPSTAT Albert Prat, 2012-12-06 COMPSTAT symposia have been held regularly since 1974 when they started in Vienna This tradition has made COMPSTAT a major forum for the interplay of statistics and computer sciences with contributions from many well known scientists all over the world The scientific programme of COMPSTAT 96 covers all aspects of this interplay from user experiences and evaluation of software through the development and implementation of new statistical ideas All papers presented belong to one of the three following categories Statistical methods preferable new ones that require a substantial use of computing Computer environments tools and software useful in statistics Applications of computational statistics in areas of substantial interest environment health industry biometrics etc
