Computational Methods for Application in Industry 4.0 Nikolaos E. Karkalos, Angelos P. Markopoulos, J. Paulo Davim, 2018-05-21 This book presents computational and statistical methods used by intelligent systems within the concept of Industry 4.0. The methods include among others evolution based and swarm intelligence based methods. Each method is explained in its fundamental aspects while some notable bibliography is provided for further reading. This book describes each method's principles and compares them. It is intended for researchers who are new in computational and statistical methods but also to experienced users. *Computational Methods in Nonlinear Structural and Solid Mechanics* Ahmed K. Noor, Harvey G. McComb, 2014-05-20 *Computational Methods in Nonlinear Structural and Solid Mechanics* covers the proceedings of the Symposium on Computational Methods in Nonlinear Structural and Solid Mechanics. The book covers the development of efficient discretization approaches, advanced numerical methods, improved programming techniques, and applications of these developments to nonlinear analysis of structures and solids. The chapters of the text are organized into 10 parts according to the issue they tackle. The first part deals with nonlinear mathematical theories and formulation aspects, while the second part covers computational strategies for nonlinear programs. Part 3 deals with time integration and numerical solution of nonlinear algebraic equations, while Part 4 discusses material characterization and nonlinear fracture mechanics, and Part 5 tackles nonlinear interaction problems. The sixth part discusses seismic response and nonlinear analysis of concrete structure, and the seventh part tackles nonlinear problems for nuclear reactors. Part 8 covers crash dynamics and impact problems, while Part 9 deals with nonlinear problems of fibrous composites and advanced nonlinear applications. The last part discusses computerized symbolic manipulation and nonlinear analysis software systems. The book will be of great interest to numerical analysts, computer scientists, structural engineers, and other professionals concerned with nonlinear structural and solid mechanics.

Computational Methods in Chemical Engineering with Maple Ralph E. White, Venkat R. Subramanian, 2010-02-06 This book presents Maple solutions to a wide range of problems relevant to chemical engineers and others. Many of these solutions use Maple's symbolic capability to help bridge the gap between analytical and numerical solutions. The readers are strongly encouraged to refer to the references included in the book for a better understanding of the physics involved and for the mathematical analysis. This book was written for a senior undergraduate or a first-year graduate student course in chemical engineering. Most of the examples in this book were done in Maple 10. However, the codes should run in the most recent version of Maple. We strongly encourage the readers to use the classic worksheet mws option in Maple as we believe it is more user-friendly and robust. In chapter one, you will find an introduction to Maple which includes simple basics as a convenience for the reader, such as plotting, solving linear and nonlinear equations, Laplace transformations, matrix operations, do loop, and while loop. Chapter two presents linear ordinary differential equations in section 1 to include homogeneous and nonhomogeneous ODEs, solving systems of ODEs using the

matrix exponential and Laplace transform method In section two of chapter two nonlinear ordinary differential equations are presented and include simultaneous series reactions solving nonlinear ODEs with Maple's `dsolve` command stop conditions differential algebraic equations and steady state solutions Chapter three addresses boundary value problems
