Computational Methods Of Linear Algebra:

Computational Methods of Linear Algebra Granville Sewell, 2005-09-19 Learn to write programs to solve linear algebraic problems The Second Edition of this popular textbook provides a highly accessible introduction to the numerical solution of linear algebraic problems Readers gain a solid theoretical foundation for all the methods discussed in the text and learn to write FORTRAN90 and MATLAB r programs to solve problems This new edition is enhanced with new material and pedagogical tools reflecting the author's hands on teaching experience including A new chapter covering modern supercomputing and parallel programming Fifty percent more examples and exercises that help clarify theory and demonstrate real world applications MATLAB r versions of all the FORTRAN90 programs An appendix with answers to selected problems The book starts with basic definitions and results from linear algebra that are used as a foundation for later chapters The following four chapters present and analyze direct and iterative methods for the solution of linear systems of equations linear least squares problems linear eigenvalue problems and linear programming problems Next a chapter is devoted to the fast Fourier transform a topic not often covered by comparable texts The final chapter features a practical introduction to writing computational linear algebra software to run on today's vector and parallel supercomputers Highlighted are double precision FORTRAN90 subroutines that solve the problems presented in the text The subroutines are carefully documented and readable allowing students to follow the program logic from start to finish MATLAB r versions of the codes are listed in an appendix Machine readable copies of the FORTRAN90 and MATLAB r codes can be downloaded from the text's accompanying Web site With its clear style and emphasis on problem solving this is a superior textbook for upper level undergraduates and graduate students *Computational Methods of Linear Algebra* D. Computational Methods for Approximation of Large-Scale Dynamical Systems Mohammad Monir Uddin, 2019-04-30 These days computer based simulation is considered the quintessential approach to exploring new ideas in the different disciplines of science engineering and technology SET To perform simulations a physical system needs to be modeled using mathematics these models are often represented by linear time invariant LTI continuous time CT systems Oftentimes these systems are subject to additional algebraic constraints leading to first or second order differential algebraic equations DAEs otherwise known as descriptor systems Such large scale systems generally lead to massive memory requirements and enormous computational complexity thus restricting frequent simulations which are required by many applications To resolve these complexities the higher dimensional system may be approximated by a substantially lower dimensional one through model order reduction MOR techniques Computational Methods for Approximation of Large Scale Dynamical Systems discusses computational techniques for the MOR of large scale sparse LTI CT systems Although the book puts emphasis on the MOR of descriptor systems it begins by showing and comparing the various MOR techniques for standard systems The book also discusses the low rank alternating direction implicit LR ADI iteration and the issues related to solving the Lyapunov equation of large scale sparse LTI systems to compute the low rank Gramian factors which are important components for implementing the Gramian based MOR Although this book is primarily aimed at post graduate students and researchers of the various SET disciplines the basic contents of this book can be supplemental to the advanced bachelor s level students as well It can also serve as an invaluable reference to researchers working in academics and industries alike Features Provides an up to date step by step guide for its readers Each chapter develops theories and

provides necessary algorithms worked examples numerical experiments and related exercises With the combination of this book and its supplementary materials the reader gains a sound understanding of the topic The MATLAB codes for some selected algorithms are provided in the book The solutions to the exercise problems experiment data sets and a digital copy of the software are provided on the book s website The numerical experiments use real world data sets obtained from industries and research institutes
