Study on the Computational Estimation Performance and Computational Estimation Attitude of Elementary School Fifth Graders in Taiwan Yea-Ling Tsao,Ting-Rung Pan,2011 Main purpose of this study is to investigate what level of computational estimation performance is possessed by fifth graders and explore computational estimation attitude towards fifth graders Two hundred and thirty five Grade 5 students from four elementary schools in Taipei City were selected for Computational Estimation Test and Computational Estimation Attitude Survey Based on 28 items of the Computational Estimation Test average number of items correctly answered by students is 16 37 the percent of correct responses is 58 48% and overall performance is moderate The Computational Estimation Test includes items representing three number dimensions whole numbers decimals and fraction numbers The data indicate that the number domain of fraction 46 63% and decimal 54 30% percent of correct response of the CET Computational Estimation Test were relatively low when compared with whole numbers 63 44% Based on 35 items of the CEAS Computational Estimation Attitude Survey the mean scores of students CEAS is 119 72 higher than average indicating that attitude of elementary school fifth graders today to

computational estimation is generally positive As to subscales of elementary school fifth graders attitude to computational estimation experience in computational estimation component is near negative and passive indicating that students experience in using computational estimation is somewhat not enough Contains 6 tables A Comparison of Teaching Strategies in Computational Estimation Norberto R.
