Weinroth,Jess S. Boronico,1996-10-21 The management of production and service processes can be supported by
microcomputer simulation models effectively and inexpensively if the techniques are presented in an understandable manner
Drs Klafehn Weinroth and Boronico prove this and show how to do it not only for the benefit of operations managers
themselves but for others with management responsibilities in a variety of businesses and industries They will learn how
important daily operations problems can be modeled on a microcomputer gain understanding of overall simulation
methodology and learn the several forms of cost savings achievable through simulation For teachers in business schools the
book will also provide a link between general management and the management of engineering and R D The first chapter

drawbacks and myths are reviewed in detail Chapter two explores in a conversational scenario what is involved in taking a
management operations problem involving a truck transfer depot from its point of inception to the formulation of a systems
operation model which in a later chapter is ultimately put into a computer simulation model and tested to in a sense come up
with answers to the questions posed in the hypothetical conversation Subsequent chapters in the book are oriented to a
discussion of other operations management problems and the effort to seek insight and solutions through simulation
modeling A Just in Time manufacturing system is addressed recognizing the push pull concept as well as looking at the

through computer simulation These levels are predicated on balancing the costs associated with ordering and holding goods
as well as the penalty costs of stocking out Using a simulated environment enables the inclusion of the variability evidenced

by the type of distribution The remaining chapters also review alternative rules and what ifs as applied to machine configuration facility location for a satellite EMS unit and job shop operations Each of the applications chapters provides a printout of the basic computer model written in GPSS that was then modified to investigate alternative scenarios
