

WHAT IS NETWORKING

Computer networking is the transmission of data and information over a communication channel between two or more computers. Communication between computers can be as simple as cabling two or more computers to the same printer or thousands of computers across the world. When your computer is a part of a network using a cable or some other communication channels, you can become a network user. Now you can share files, folders and computer hardware such as printer scanner etc. attached to the network.

Uses/advantages of Computer Network

SHARING EQUIPMENT

Computer network is also used for sharing hardware like scanners and printers, with everyone on the network group. This reduces the cost of buying computer hardware as laser printers and large hard disks can be expensive. Networks enable users to share such equipments by networking microcomputers or workstations.
