Computer Analysis Of Visual Textures:

Computer Analysis of Visual Textures Fumiaki Tomita, Saburo Tsuji, 2013-11-11 This book presents theories and techniques for perception of textures by computer Texture is a homogeneous visual pattern that we perceive in surfaces of objects such as textiles tree barks or stones Texture analysis is one of the first important steps in computer vision since texture provides important cues to recognize real world objects A major part of the book is devoted to two dimensional analysis of texture patterns by extracting statistical and structural features It also deals with the shape from texture problem which addresses recovery of the three dimensional surface shapes based on the geometry of projection of the surface texture to the image plane Perception is still largely mysterious Realizing a computer vision system that can work in the real world requires more research and experiment Capability of textural perception is a key component We hope this book will contribute to the advancement of computer vision toward robust useful systems We would like to express our appreciation to Professor Takeo Kanade at Carnegie Mellon University for his encouragement and help in writing this book to the members of Computer Vision Section at Electrotechnical Laboratory for providing an excellent research environment and to Carl W Harris at Kluwer Academic Publishers for his help in preparing the manuscript

Computational Models of Visual Processing Michael S. Landy,J. Anthony Movshon,1991 The more than twenty contributions in this book all new and previously unpublished provide an up to date survey of contemporary research on computational modeling of the visual system The approaches represented range from neurophysiology to psychophysics and from retinal function to the analysis of visual cues to motion color texture and depth The contributions are linked thematically by a consistent consideration of the links between empirical data and computational models in the study of visual function An introductory chapter by Edward Adelson and James Bergen gives a new and elegant formalization of the elements of early vision Subsequent sections treat receptors and sampling models of neural function detection and discrimination color and shading motion and texture and 3D shape Each section is introduced by a brief topical review and summary ContributorsEdward H Adelson Albert J Ahumada Jr James R Bergen David G Birch David H Brainard Heinrich H B lthoff Charles Chubb Nancy J Coletta Michael D Zmura John P Frisby Norma Graham Norberto M Grzywacz P William Haake Michael J Hawken David J Heeger Donald C Hood Elizabeth B Johnston Daniel Kersten Michael S Landy Peter Lennie J Stephen Mansfield J Anthony Movshon Jacob Nachmias Andrew J Parker Denis G Pelli Stephen B Pollard R Clay Reid Robert Shapley Carlo L M Tiana Brian A Wandell Andrew B Watson David R Williams Hugh R Wilson Yuede Yang Alan L Yuille

Integrating Computational and Neural Findings in Visual Object Perception Judith C. Peters,Hans P. Op de Beeck,Rainer Goebel,2016-06-29 The articles in this Research Topic provide a state of the art overview of the current progress in integrating computational and empirical research on visual object recognition Developments in this exciting multidisciplinary field have recently gained momentum High performance computing enabled breakthroughs in computer vision and computational neuroscience In parallel innovative machine learning applications have recently become available for datamining the large scale high resolution brain data acquired with ultra high field fMRI and dense multi unit recordings Finally new techniques to integrate such rich simulated and empirical datasets for direct model testing could aid the development of a comprehensive brain model We hope that this Research Topic contributes to these encouraging advances and inspires future research avenues in computational and empirical neuroscience

Computer Methods for Analysis

and Synthesis of Visual Texture, 1973 Computer methods are presented which deal with the problems of visual texture specifically Texture Analysis and Texture Synthesis The Decision Theory Method as its name indicates is based on the principles of statistical decision theory This method in conjunction with the Interval Covering Theory automatically generates a set of interval complexes which act as 2 D filters that detect texture features in the scene of analysis The versatility of this method to deal with various problems of visual texture such as scene segmentation using textural information extraction of texture borders discrimination recognition of both spatially and chromatically textured scenes etc is demonstrated A model is proposed that views the pixels of a digitized textural scene as a two way seasonal time series Based on this model a method is developed for synthesis of natural looking textures This method possesses a desirable quality that the parameters needed for the synthesis are derived from the analysis of parent texture i e the texture to be imitated Extending the concepts of two dimensional formal grammars known as array grammars multilevel array grammars are introduced These are shown capable of generating complex texture scenes specifically brickwall type texture that is those textures which are perceived at many levels and at each level they can be either structural or statistical A way of specifying these grammars for texture scenes in real cases with the help of interval complexes is also indicated 96 references auth
