Computer Assisted Reservoir Management:

Computer-Assisted Reservoir Management Gaurav Vashishth, 2015-03 Computer assisted is a prefix that hints to the use of a computer as an indispensable tool in a certain field usually derived from more traditional fields of science and engineering Reservoir management is a dynamic process that recognizes the uncertainties in reservoir performance resulting from our inability to fully characterize reservoirs and flow processes It seeks to mitigate the effects of these uncertainties by optimizing reservoir performance through a systematic application of integrated multidisciplinary technologies It approaches reservoir operation and control as a system rather than as a set of disconnected functions As such it is a strategy for applying multiple technologies in an optimal way to achieve synergy
