Introduction to Computer Crime Jay BloomBecker,1985 **Guide to Cybersecurity** Vincent Bronson,2021-01-17

Cybercrime also called computer crime the use of a computer as an instrument to further illegal ends such as committing fraud trafficking in child pornography and intellectual property stealing identities or violating privacy Cybercrime especially through the Internet has grown in importance as the computer has become central to commerce entertainment and government Because of the early and widespread adoption of computers and the Internet in the United States most of the earliest victims and villains of cybercrime were Americans By the 21st century though hardly a hamlet remained anywhere in the world that had not been touched by cybercrime of one sort or another New technologies create new criminal opportunities but few new types of crime What distinguishes cybercrime from traditional criminal activity Obviously one difference is the use of the digital computer but technology alone is insufficient for any distinction that might exist between different realms of criminal activity Criminals do not need a computer to commit fraud traffic in child pornography and intellectual property steal an identity or violate someone s privacy All those activities existed before the cyber prefix became ubiquitous Cybercrime especially involving the Internet represents an extension of existing criminal behaviour alongside some novel illegal activities Most cybercrime is an attack on information about individuals corporations or governments Although the attacks do not take place on a physical body they do take place on the personal or corporate virtual body which is the set of informational attributes that define people and institutions on the Internet In other words in the digital age our virtual identities are essential elements of everyday life we are a bundle of numbers and identifiers in multiple computer databases owned by governments and corporations Cybercrime highlights the centrality of networked computers in our lives as well as the fragility of such seemingly solid facts as individual identity An important aspect of cybercrime is its nonlocal character actions can occur in jurisdictions separated by vast distances This poses severe problems for law enforcement

since previously local or even national crimes now require international cooperation For example if a person accesses child pornography located on a computer in a country that does not ban child pornography is that individual committing a crime in a nation where such materials are illegal Where exactly does cybercrime take place Cyberspace is simply a richer version of the space where a telephone conversation takes place somewhere between the two people having the conversation As a planet spanning network the Internet offers criminals multiple hiding places in the real world as well as in the network itself However just as individuals walking on the ground leave marks that a skilled tracker can follow cybercriminals leave clues as to their identity and location despite their best efforts to cover their tracks In order to follow such clues across national boundaries though international cybercrime treaties must be ratified In 1996 the Council of Europe together with government representatives from the United States Canada and Japan drafted a preliminary international treaty covering computer crime Around the world civil libertarian groups immediately protested provisions in the treaty requiring Internet service providers ISPs to store information on their customers transactions and to turn this information over on demand Work on the treaty proceeded nevertheless and on November 23 2001 the Council of Europe Convention on Cybercrime was signed by 30 states
