**Guide to Intelligent Data Analysis** Michael R. Berthold, Christian Borgelt, Frank Höppner, Frank Klawonn, 2010-06-23 Each passing year bears witness to the development of ever more powerful computers increasingly fast and cheap storage media and even higher bandwidth data connections This makes it easy to believe that we can now at least in principle solve any problem we are faced with so long as we only have enough data Yet this is not the case Although large databases allow us to retrieve many different single pieces of information and to compute simple aggregations general patterns and regularities often go undetected Furthermore it is exactly these patterns regularities and trends that are often most valuable To avoid the danger of drowning in information but starving for knowledge the branch of research known as data analysis has emerged and a considerable number of methods and software tools have been developed However it is not these tools alone but the intelligent application of human intuition in combination with computational power of sound background knowledge with computer aided modeling and of critical reflection with convenient automatic model construction that results in successful intelligent data analysis projects Guide to Intelligent Data Analysis provides a hands on instructional approach to many basic data analysis techniques and explains how these are used to solve data analysis problems Topics and features guides the reader through the process of data analysis following the interdependent steps of project understanding data understanding data preparation modeling and deployment and monitoring equips the reader with the necessary information in order to obtain hands on experience of the topics under discussion provides a review of the basics of classical statistics that support and justify many data analysis methods and a glossary of statistical terms includes numerous examples using R and KNIME together with appendices introducing the open source software integrates illustrations and case study style examples to support pedagogical exposition This practical and systematic textbook reference for graduate and advanced undergraduate students is also essential reading for all professionals who face data analysis problems Moreover it is a book to be used following one's exploration of it Dr Michael R Berthold is Nycomed Professor of Bioinformatics and Information Mining at the University of Konstanz Germany Dr Christian Borgelt is Principal Researcher at the Intelligent Data Analysis and Graphical Models Research Unit of the European Centre for Soft Computing Spain Dr Frank Höppner is Professor of Information Systems at Ostfalia University of Applied Sciences Germany Dr Frank Klawonn is a Professor in the Department of Computer Science and Head of the Data Analysis and Pattern Recognition Laboratory at Ostfalia University of Applied Sciences Germany He is also Head of the Bioinformatics and
