Ambient Rhetoric Thomas J. Rickert, 2013-05-10 In Ambient Rhetoric Thomas Rickert seeks to dissolve the boundaries of the rhetorical tradition and its basic dichotomy of subject and object With the advent of new technologies new media and the dispersion of human agency through external information sources rhetoric can no longer remain tied to the autonomy of human will and cognition as the sole determinants in the discursive act Rickert develops the concept of ambience in order to engage all of the elements that comprise the ecologies in which we exist Culling from Martin Heidegger's hermeneutical phenomenology in Being and Time Rickert finds the basis for ambience in Heidegger's assertion that humans do not exist in a vacuum there is a constant and fluid relation to

the material informational and emotional spaces in which they dwell Hence humans are not the exclusive actors in the rhetorical equation agency can be found in innumerable things objects and spaces As Rickert asserts it is only after we become attuned to these influences that rhetoric can make a first step toward sufficiency Rickert also recalls the foundational Greek philosophical concepts of kairos time chora space place and periechon surroundings and cites their repurposing by modern and postmodern thinkers as informational scaffolding for how we reason feel and act He discusses contemporary theory in cognitive science rhetoric and object oriented philosophy to expand his argument for the essentiality of ambience to the field of rhetoric Rickert then examines works of ambient music that incorporate natural and artificial sound spaces and technologies finding them to be exemplary of a more fully resonant and experiential media In his preface Rickert compares ambience to the fermenting of wine how its distinctive flavor can be traced to innumerable factors including sun soil water region and grape variety The environment and company with whom it s consumed further enhance the taste experience And so it should be with rhetoric to be considered among all of its influences As Rickert demonstrates the larger world that we inhabit and that inhabits us must be fully embraced if we are to advance as beings and rhetors within it

The Cold War for Information Technology Janez Škrubej, 2012-12 The Cold War for Information Technology is a captivating new book that uncovers a little known but vital battle to gain control over IT development that took place in the final two decades of the 20th century As you might expect intelligence agencies from the United States the Soviet Union India and China all played major roles However remarkably an IT company from Tito's unaligned Yugoslavia called Iskra Delta wound up right in the middle of this epic struggle to control IT For despite its small size Iskra Delta obtained permission from the U S to work through the U S embargo that at the time prohibited exporting information technology to the East Being at a kind of digital crossroads for the East and West gave the company a massive influence that belied its small size By 1986 the tiny Yugoslav IT company had built one of the largest computer networks in the world for the Chinese police But Iskra Delta's innovativeness would ultimately draw it into the center of the international struggle to control the emerging IT world with presidents of the Soviet Union China and India personally paying a visit Suddenly the company was in the crosshairs of international intelligence agencies like the CIA and the KGB Author Janez Škrubej was managing Iskra Delta during the time all of this was taking place and witnessed *The Cold War for Information Technology* first hand This book is his story Janez Škrubej is a retired IT professional and MIT alumnus who lives in the picturesque village of Rudolfovo Slovenia When he is not writing Janez enjoys keeping up with the latest IT news and making his own plum brandy Publisher's website <http://sbpra.com/janezskrubelj>

The Cult of Information Theodore Roszak, 1986 When the word computer entered the general vocabulary in the 1950s the most advanced example filled a reasonable sized room Three decades of rapid technological revolution have resulted in the acceptance of computers in nearly every office school and home A corresponding dramatic rise in the status of information has promoted the people who manipulate it from the status of office clerks to information scientists Despite the wonderful claims for the abilities of the computer and the hallowed tones of

computerese Theodore Roszak dares to suggest that perhaps like the unfortunate emperor the computer has been overdressed with false claims made by those with something to gain by it elements in our society that are making some of the most morally questionable uses of computer power Roszak challenges the reader to ask Is our capacity to think creatively being undermined by the very information that is supposed to help us Is information processing being confused with science or even beginning to replace thought And are we in danger of blurring the distinction between what machines do when they process information and what minds do when they think He explains why humankind's primary beliefs in equality justice and in God are not computable why great scientific theories and fundamental master ideas cannot be developed by computers and why bad ideas cannot even be refuted by them Roszak is no contemporary Luddite this book was written on a word processor but he is deeply concerned that we have all been sold a misleading and potentially harmful vision of the computerised society

Electronic Brains Mike

Hally,2005-09-23 We've come so far so fast Within a relatively short period of time we've managed to put enormous computing power in offices and homes around the globe But before there was an IBM computer before there were laptops and personal PCs there were small independent teams of pioneers working on the development of the very first computer Scattered around the globe and ranging in temperament and talent they forged the future in basement labs backyard workshops and old horse barns Tracing the period just after World War II when the first truly modern computers were developed Electronic Brains chronicles the escapades of the world's first techies Some of the initial projects are quite famous and well known such as LEO the Lyons Electronic Office which was developed by the catering company J Lyons Co in London in the 1940s Others are a bit more arcane such as the ABC which was built in a basement at Iowa State College and was abandoned to obscurity at the beginning of WWII And then like the tale of the Rand 409 which was constructed in a barn in Connecticut under the watchful eye of a stuffed moose there are the stories that are virtually unknown All combine to create a fascinating history of a now ubiquitous technology Relying on extensive interviews from surviving members of the original teams of hardware jockeys author Mike Hally recreates the atmosphere of the early days of computing Rich with provocative and entertaining descriptions we are introduced to the many eccentric obsessive and fiercely loyal men and women who laid the foundations for the computerized world in which we now live As the acronyms fly fast and furious UNIVAC CSIRAC and MESM to name just a few Electronic Brains provides a vivid sense of time place and science
