

## **COMPUTER HARDWARE & MAINTENANCE**

Maintenance of computer hardware is a way of taking care, repairing and replacing broken and failing computer hardware.

Maintenance is necessary on computer to avoid hardware failure or losing valuable information and most times, hardware breaks without notice. Excess heat accelerates the deterioration of the delicate circuits in the system. Dust and dirt are the most common cause of overheating. Thus, cleaning a case is done to prevent components from overheating.

Computer hardware components attract dust, dirt, lint, carpet fibres, pet hair and smoke particles. The air from the computer cooling fan contains grime which settles on the components and causes overheating which eventually results in permanent hardware failure.

As a result of this, complete cleaning should be done at least once a year and if the computer is used in hot, dusty moist environment, cleaning must be performed more frequently.

### **PROCESS OF MAINTAINING COMPUTER HARDWARE**

#### **GENERAL COMPUTER CLEANING**

**Step 1:** Always shut down, power off the system before carrying out any computer maintenance.

**Step 2:** Never sprays any liquid onto any computer component. Spray or pour the liquid on a lint - free cloth and wipe the PC with the cloth. Avoid product with certain cellulose which will leave streaks on your computer equipment. The use of paper towels or an old rag to clean delicate surfaces of a computer should be discouraged because paper products contain cellulose which can scratch delicate surfaces of your hardware.

**Step 3:** Use vacuum cleaner to remove dirt, dust, food and hair from keyboards. It is advisable to wear an anti - static wrist strip to reduce the transfer of static electricity from the body to the computer.

**Step 4:** Do not apply cleaning solution including water directly to computer components.
