Computer Network Architectures and Protocols Carl A. Sunshine,2013-06-29 This is a book about the bricks and mortar from which are built those edifices that will permeate the emerging information society of the future computer networks For many years such computer networks have played an indirect role in our daily lives as the hidden servants of banks airlines and stores Now they are becoming more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks function is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area soon finds that solving the traditional problems of transmission modulation noise immunity and error bounds in getting the signal from one point to another is just the beginning of the challenge The communication must be in the right form to be routed properly to be handled without congestion and to be understood at various points in the network As for the computer scientist he finds that his discipline has also changed The fraction of computers that belong to networks is increasing all the time And for a typical single computer the fraction of its execution load storage occupancy and system management problems that are involved with being part of a network is also growing

Computer Network Architectures and Protocols Paul Green,2012-12-06 This is a book about the bricks and mortar out of which are built those edifices that so well characterize late twentieth century industrial society networks of computers and terminals Such computer networks are playing an increasing role in our daily lives somewhat indirectly up to now as the hidden servants of banks retail credit bureaus airline reservation offices and so forth but soon they will become more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks work is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area finds himself in suddenly unfamiliar territory It is no longer sufficient for him to think of transmission modulation noise immunity error bounds and other abstractions of a single communication link he is dealing now with a topologically complex interconnection of such links And what is more striking solving the problems of getting the signal from one point to another is just the beginning of the communication process The communication must be in the right form to be routed properly to be handled without congestion and to be understood at the right points in the network The communication scientist suddenly finds himself charged with responsibility for such things as code and format conversions addressing flow control and other abstractions of a new and challenging kind
