Parallel Computers 2 R.W Hockney, C.R Jesshope, 1988-01-01 Since the publication of the first edition parallel
computing technology has gained considerable momentum A large proportion of this has come from the improvement in VLSI
techniques offering one to two orders of magnitude more devices than previously possible A second contributing factor in the
fast development of the subject is commercialization The supercomputer is no longer restricted to a few well established
research institutions and large companies A new computer breed combining the architectural advantages of the
supercomputer with the advance of VLSI technology is now available at very attractive prices A pioneering device in this
development is the transputer a VLSI processor specifically designed to operate in large concurrent systems **Parallel
Computers 2 Architecture Programming and Algorithms** reflects the shift in emphasis of parallel computing and tracks the
development of supercomputers in the years since the first edition was published It looks at large scale parallelism as found
in transputer ensembles This extensively rewritten second edition includes major new sections on the transputer and the
OCCAM language The book contains specific information on the various types of machines available details of computer
architecture and technologies and descriptions of programming languages and algorithms Aimed at an advanced
undergraduate and postgraduate level this handbook is also useful for research workers machine designers and
programmers concerned with parallel computers In addition it will serve as a guide for potential parallel computer users
especially in disciplines where large amounts of computer time are regularly used **Computer structure** C. Gordon

Texas Symposium on Computer Systems** ,1972 *Abstract Machine Models for Highly Parallel Computers* John R.
Davy, P. M. Dew, 1995 The papers collected in this volume cover a wide range of issues relevant to abstract models including
terminology and concepts for abstract models of computation models for general purpose parallel computing declarative
models performance modelling and special purpose parallel models The papers originated from the Second Workshop on
Abstract Machine Models for Highly Parallel Computers sponsored by the BCS Parallel Processing Specialist Group Overall
themes of the workshop were the specification implementation and application of such models and the identification of
key issues for future research **Computer Architecture: A computer zoo, ch. 9-16** Gerrit A. Blaauw, Frederick P. Brooks
