

What is the information processing cycle?

To understand how a computer functions it is important to understand the information processing cycle.

The information processing cycle refers to the chain or cycle of events that take place when you use a computer to do some work.

The information processing cycle comprises the following events.

1. **Input:** This is the activity of entering data into the computer.
2. **Processing:** This refers to the activity of performing operations on the data.
3. **Output:** This is the activity that presents the results to the computer user.
4. **Storage:** This refers to the activity of saving
