Malcolme-Lawes,2012-12-06 The invention of the microcomputer in the mid 1970s and its subsequent low cost proliferation has opened up a new world for the laboratory scientist Tedious data collection can now be automated relatively cheaply and with an enormous increase in reliability New techniques of measurement are accessible with the intelligent instrumentation made possible by these programmable devices and the ease of use of even standard measurement techniques may be improved by the data processing capabilities of the humblest micro The latest items of commercial laboratory instrumentation are invariably computer controlled although this is more likely to mean that a microprocessor is involved than that a versatile microcomputer is provided along with the instrument It is clear that all scientists of the future will need some knowledge of computers if only to aid them in mastering the button pushing associated with gleaming new instruments However to be able to exploit this newly accessible computing power to the full the practising laboratory scientist must gain sufficient understanding to utilise the communication channels between apparatus on the laboratory bench and program within the computer This book attempts to provide an introduction to those communication channels in a manner which is understandable for scientists who do not specialise in electronics or

computers *Computers in Scientific Instrumentation* Christie G. Enke,MICHIGAN STATE UNIV EAST LANSING DEPT OF CHEMISTRY.,1982 The rapid evolution of computer applications in scientific instrumentation is briefly traced from early data processing to modern computer based instruments Computer and interface developments have both contributed to this evolution The form of the computer used strongly affects the ease of instrument operation and the degree of functional adaptability Probable pathways toward instruments with increased intelligence include the development and intelligent control of powerful multidimensional instruments the implementation of hierarchical computer networks and multiprocessor controllers and the simplification of programming The importance of the scientist s involvement in these developments is discussed Author **Digital Computers in Scientific Instrumentation: Applications to Chemistry** Sam P.
