

Anyone who has worked in car production or as a travel agent knows that robots, automation, and software may replace people. The assertion made by Brynjolfsson and McAfee, on the other hand, is more problematic and contentious. They believe that rapid technological progress is killing jobs at a quicker rate than it is generating them, resulting in median income stagnation and rising inequality. Of course, there is anecdotal evidence that digital technologies are threatening jobs. For decades, robots and advanced automation have been used in many forms of production. In clerical and professional services, a less dramatic shift is taking place, but it has the potential to have a significantly greater impact on employment. Many everyday jobs are becoming automated thanks to technologies like the Web, artificial intelligence, big data, and enhanced analytics, which are all made feasible by the ever-increasing availability of inexpensive computer power and storage capacity. As he recounts achievements like Google's driverless automobile, McAfee, associate director of the MIT Sloan School of Management's Center for Digital Business, speaks quickly and with a sense of astonishment. Despite his clear enthusiasm for the technology, he does not believe the previously lost employment will reap reappearance. He believes that if digital technologies—fueled by “enough computer power, data, and geeks”—continue to progress exponentially over the next few decades, the pressure on jobs and the consequent inequality will only become worse.

While the data so far suggests that automation isn't playing quite as major a part in the labour market issues encountered by young people as COVID, it's still critical that help is offered to those who are suffering as a result of the epidemic. It's generally known that in prior recessions, such as 2008 and the early 1990s, unemployment tended to jam the labour market following the recession, making it particularly difficult for young people to find work. As a result, the authors suggest that governments should provide assistance to assist young people in returning to stable employment. Even if their assumption that AI is to blame is well off the mark, they are almost surely going to be tremendously significant.

International Books in Print, 1997. Engineering Professionalism Ulrik Jørgensen, Søsner Brodersen, 2016-11-25. The research presented in this book provides analytical frameworks and case studies on engineering practices in education and professional work. The studies are inspired by practice theory as well as science and technology studies. The contributions demonstrate how these practices mutually depend in co-construction processes in different domains of engineering. In order to demonstrate these essentially dynamic features, the empirical material is aimed at unravelling the interrelatedness of educational and work practices in engineering and analysing them as inherently situated in order to understand how engineering professionalism is produced. The studies are motivated by the following questions: How can we understand different engineering practices and how do they relate? Which dimensions facilitate transitions between educational practices and work practices? Where is engineering professionalism learned and the engineering mindset constituted? How does engineering professionalism change in response to societal challenges? The studies focus on the responses to societal challenges in education and professional work settings. The outcomes show how engineering has responded to challenges concerning environment, energy, sustainability, design, user interactions, community engagement, and entrepreneurship. This has been done through the identification of codes of meaning and the institutions that frame the translation from challenges to professional responses. How these responses are performed within engineering professionalism is crucial for the societal role of engineering. The concluding chapter synthesizes the answers to these questions and the lessons learned from attempts to develop engineering in the different settings studied. It highlights the linkages among them, drawing on findings and details from the individual chapters as well as the literature in which they are situated, showing how the different sites interact and produce specific representations and frameworks central to engineering professionalism.

IETE Technical Review, 1995. **Copyright and Electronic Commerce: Legal Aspects of Electronic Copyright Management** Kamiel Koelman, 2000-04-19. The spectacular success of electronic commerce in recent years has seen an explosion in the availability of information and entertainment products on the Internet. This distribution of content is expected to continue as one of the major sources of growth on the Internet in the years ahead, raising concerns over the protection of content owners' rights. Concerns over the effectiveness of the copyright system in a digital environment have inspired content providers to look for alternative protection regimes or strategies. These

alternatives such as the protection afforded by contract law and information technology comprise important elements of the Electronic Copyright Management System ECMS a fully automated system of secure distribution rights management monitoring and payment of copyright protected content currently being developed Perhaps the largest multidisciplinary study conducted on ECMS to date is the IMPRIMATUR project which was subsidised by the European Commission s Esprit Programme and for which the Institute for Information Law of the University of Amsterdam IViR produced a series of legal studies This volume collects six fully revised and updated studies relating to copyright and electronic commerce which have resulted from the IViR s research As well as examining the legal issues crucial to the development of electronic copyright management systems the contributions address issues with wider implications for the law of copyright in general Other aspects of information law are also considered such as defamation data protection privacy and freedom of expression and information as are general questions of contract and tort law
