Computational Methods in Transport Frank Graziani, 2006-02-17 There exist a wider range of applications where as in a cant fraction of the momentum and energy present in a physical problem is carried by the transport of particles Depending on the specific application the particles involved may be photons neutrons neutrinos or charged particles Regardless of which phenomena is being described at the heart of each application is the fact that a Boltzmann like transport equation has to be solved The complexity and hence expense involved in solving the transport problem can be understood by realizing that the general solution to the 3D Boltzmann transport equation is in fact really seven dimensional 3 spatial coordinates 2 angles 1 time and 1 for speed or energy Low order approximations to the transport equation are frequently used due in part to physical justification but many in cases simply because a solution to the full transport problem is too computationally expensive An example is the diffusion equation which effectively drops the two angles in phase space by assuming that a linear representation in angle is adequate Another approximation is the grey approximation which drops the energy variable by averaging over it If the grey approximation is applied to the diffusion equation the expense of solving what amounts to the simplest possible description of transport is roughly equal to the cost of implicit computational fluid dynamics It is clear therefore that for those application areas needing some form of transport fast accurate and robust transport algorithms can lead to an increase in overall code performance and a decrease in time to solution New Computational Methods in Power System Reliability David Elmakias, 2008-05-22 Power system reliability is in the focus of intensive study due to its critical role in providing energy supply to the modern society This book is not aimed at providing the overview of the state of the art in power system reliability On the contrary it describes application of some new specific techniques universal generating function method and its combination with Monte Carlo simulation and with random processes methods Semi Markov and Markov reward models and genetic algorithm The book can be considered as complementary to power system reliability textbooks It is suitable for different types of readers It primarily addresses practising reliability engineers and researchers who have an interest in reliability and performance analysis of power systems It can also be used as a textbook for senior undergraduate or graduate courses in electrical engineering Nuclear Science Abstracts, 1969 **Mathematical and Computational Methods in Biology** Alejandro Maass, Salomé Martínez, Élisabeth Pécou, 2006 Computer Methods for Partial Differential Equations: Elliptic equations and the finite-element method Robert Vichnevetsky, 1981 **Computing Methods in Geophysical Mechanics** Richard Paul Shaw, 1977 **Computational Methods in Number Theory** H.
