Computing in the Humanities and Social Sciences Robert Sher Tannenbaum, [Computing in the Humanities and Social Sciences: Fundamentals](#) Robert Sher Tannenbaum,1988 **Encyclopedia of Library and Information Science** Allen Kent,1992-10-21 The Encyclopedia of Library and Information Science provides an outstanding resource in 33 published volumes with 2 helpful indexes This thorough reference set written by 1300 eminent international experts offers librarians information computer scientists bibliographers documentalists systems analysts and students convenient access to the techniques and tools of both library and information science Impeccably researched cross referenced alphabetized by subject and generously illustrated the Encyclopedia of Library and Information Science integrates the essential theoretical and practical information accumulating in this rapidly growing field **Philosophy and Computing** Luciano Floridi,2002-01-04 Philosophy and Computing explores each of the following areas of technology the digital revolution the computer the Internet and the Web CD ROMs and Multimedia databases textbases and hypertexts Artificial Intelligence the future of computing Luciano Floridi shows us how the relationship between philosophy and computing provokes a wide range of philosophical questions is there a philosophy of information What can be achieved by a classic computer How can we define complexity What are the limits of quantum computers Is the Internet an intellectual space or a polluted environment What is the paradox in the Strong Artificial Intelligence program Philosophy and Computing is essential reading for anyone wishing to fully understand both the development and history of information and communication technology as well as the philosophical issues it ultimately raises [The Humanities Computing Yearbook 1989-1990](#) Ian Lancashire,1991 This is the second in a series of comprehensive annual reference guides to the use of computers in all the disciplines of the humanities Like its predecessor this volume provides a taxonomy of the field and an annotated survey of publications research centers text archives and termbanks electronic communications software and hardware relevant to the humanities It also includes special larger entries for important software that offer up to date information and practical help in applying that information to research projects and instruction in colleges and universities For the 1989 1990 edition Lancashire has for the first time appointed an international advisory board of specialists to assist in discovering assembling and evaluating materials for inclusion and to keep up with the rapidly developing nature of the field and its international constituency Lancashire has included many completely new or revised sections including a major new chapter on computing in Law A monumental work of current and enduring value The Humanities Computing Yearbook will prove invaluable to a wide range of students teachers and researchers in humanities and social sciences computational linguistics and related fields in computer science **The Teaching of Historical Computing** Virginia Davis,1993 *Soft Computing Methods in Human Sciences* Vesa A Niskanen,2013-06-05 This book considers Soft Computing methods and their applications in the human sciences Soft Computing methods including fuzzy systems neural networks evolutionary computing and probabilistic reasoning are state of

the art methods in theory formation and model construction They mainly stem from the natural sciences and they have already proved to be powerful in their applications because Soft Computing models particularly fuzzy system models are simple and correspond well to the actual world and to human reasoning Hence we no longer have to use the complicated mathematical models that have prevailed in this research area Dozens of books and thousands of articles have been devoted to applications of Soft Computing in the natural sciences but only a few studies have focused on its applications in the human sciences such as the social and the behavioral sciences this despite the fact that these novel methods seem to open a number of inspiring prospects in these disciplines In quantitative research in the human sciences typical application areas include statistical models that can be replaced by simpler numerical or linguistic Soft Computing models In qualitative research Soft Computing methods can enhance modelling because instead of having to do manual work we can use computer simulations with approximate and or linguistic constituents **Library Trends** University of Illinois Library School,1992

Computing in the Humanities and Social Sciences Series ,1988 A Historian's Guide to Computing Daniel I. Greenstein,1994 This comprehensive guide is written for historians and other scholars with no prior expertise in the use of computers who need to know what kind of problems computers can solve Dr Greenstein offers advice on how to exploit the computer and avoid potential pitfalls in day to day tasks from bibliographic management to the use of electronic mail and on line library catalogues The three central chapters on research methods examine databases and information management numbers and measurement including statistics and graphical and tabular display and document preparation and textual analysis The final chapter offers an eight point guide to project management which will help the user to harness the computer in a cost effective efficient and productive manner for projects of any size and complexity Throughout the book methodological and technical discussion is presented in straightforward and precise language augmented by comprehensible diagrams with reference to real historical problems and data sets The book is not tied to specific software or solutions but offers numerous signposts for the reader in search of more detailed or more narrowly defined information *Subject Guide to Books in Print* ,1991 **Recent Advances in Computing Sciences** Manmohan Sharma,Mintu Nath,Sophiya
