Balanced Automation Systems:

Balanced Automation Systems II Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2013-06-29 xiv box for Balanced Automation research in this area is still young and emerging In our opinion the development of hybrid balanced solutions to cope with a variety of automation levels and manual approaches is a much more challenging research problem than the search for a purely automatic solution Various research activities described in this book illustrate some of these challenges through the development proposals assisting tools and initial results In certain chapters however the balancing aspects are not yet achieved in the research area but their inclusion in this book is intended to give a broader and more comprehensive perspective of the multiple areas involved One important aspect to be noticed is the extension and application of the concept of balanced automation to all areas of the manufacturing enterprise Clearly the need for a balanced approach is not restricted to the shop floor components rather it applies to all other areas as illustrated by the wide spectrum of research contributions found in this book For instance the need for an appropriate integration of multiple systems and their perspectives is particularly important for the implantation of virtual enterprises Although both the BASYS 95 and the BASYS 96 conferences have provided important contributions approaches and tools for the implantation of balanced automation systems there are a number of areas that require further research

Camarinha-Matos, Hamideh Afsarmanesh, 2013-06-05 Towards Balanced Automation The concept Manufacturing industries worldwide are facing tough challenges as a consequence of the globalization of economy and the openness of the markets Progress of the economic blocks such as the European Union NAFTA and MERCOSUR and the global agreements such as GATT in addition to their obvious economic and social consequences provoke strong paradigm shifts in the way that the manufacturing systems are conceived and operate To increase profitability and reduce the manufacturing costs there is a recent tendency towards establishing partnership links among the involved industries usually between big industries and the networks of components suppliers To benefit from the advances in technology similar agreements are being established between industries and universities and research institutes Such an open tete cooperation network may be identified as an extended enterprise or a virtual enterprise In fact the manufacturing process is no more carried out by a single enterprise rather each enterprise is just a node that adds some value a step in the manufacturing chain to the cooperation network of enterprises The new trends create new scenarios and technological challenges especially to the Small and Medium size Enterprises SMEs that clearly comprise the overwhelming majority of manufacturing enterprises worldwide Under the classical scenarios these SMEs would have had big difficulties to access or benefit from the state of the art technology due to their limited human financial and material resources

engineering *Computer-Assisted Management and Control of Manufacturing Systems* Spyros G. Tzafestas, 2012-12-06
Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence. At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells. Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations. These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes. CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise. Actually a CIM system must take into account in a unified way the following three views: the user view, the technology view and the enterprise view. This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system.

BASYS conferences were initially organized to promote the development of balanced automation systems. The first BASYS conference was successfully launched in Victoria Brazil in 1995. BASYS 06 is the 7th edition in this series. This book comprises three invited keynote papers and forty nine regular papers accepted for presentation at the conference. All together these papers will make significant contributions to the literature of Intelligent Technology for Balanced Manufacturing Systems.

Intelligent Systems for Manufacturing Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2013-06-29
Towards Intelligent Manufacturing Systems. This book contains the selected articles from the third International Conference on Information Technology for Balanced Automation Systems in Manufacturing. A rapid evolution in a number of areas leading to Intelligent Manufacturing Systems has been observed in recent years. Significant efforts are being spent on this research area namely in terms of international cooperative projects like the IMS initiative, the USA NIIIP National Industrial Information Infrastructure Protocols project or the European ESPRIT programme and a growing number of conferences and workshops. The importance of the Information and Communication Technologies in the manufacturing area is well established today. The proper combination of these areas with the socio organizational issues supported by intelligent tools is however more difficult to achieve and fully justifies the need for the BASYS conference and the publication of the series of books on Balanced Automation Systems. The first book of this series focused on the topic of Architectures and Design Methods was published in 1995. Many of the fundamental aspects of manufacturing and some preliminary results were presented in this book. Among others the topics included Modeling and design of FMS, Enterprise modeling and organization, Decision support systems in manufacturing, Anthropocentric systems, CAE, CAD, CAM integration, Scheduling systems, Extended enterprises, Multi agent system architecture, Balanced flexibility, Intelligent supervision systems, Shop floor
