Cambridge Guide To Astronomical Discovery:

The Cambridge Guide to Astronomical Discovery William Liller, 1992-10-30 Excellent introduction to finding previously unknown comets asteroids novae and supernovae [The Art and Science of CCD Astronomy](#) David Ratledge, 2012-12-06 Charge coupled Devices CCDs have revolutionised astronomy Even affordable CCD cameras can be ten times as sensitive as photographic film and they deliver a digitised image that is easy to enhance using a personal computer David Ratledge has brought together contributions from twelve leading amateurs from around the world people who are routinely producing astronomical images of a quality that rivals those of professional observatories only of 10 years ago These experts describe their techniques and solutions and offer essential tips and advice for anyone who is choosing or using a CCD camera Now glance through the Colour Gallery at the back of this book to see just what they have done *The Sky is Your Laboratory* Robert Buchheim, 2007-10-04 For the experienced amateur astronomer who is wondering if there is something useful valuable and permanent that can be done with his or her observational skills the answer is Yes you can This is the book for the experienced amateur astronomer who is ready to take a new step in his or her astronomical journey Unfortunately there is no modern text that points curious amateur astronomers to the research possibilities that are open to them At the 2006 meeting of the Society for Astronomical Sciences quite a few participants agreed that the lack of such a text was a serious gap in the astronomical book market and that this gap is impeding their efforts to encourage more amateur astronomers to get involved in research collaborations This book will fill that gap and enable more amateur astronomers to add research type studies to their pursuit of the hobby Written by an astronomer who is well known amongst the amateur and professional community for the skill and quality of his work this book describes a wide range of research areas where amateurs are gathering new scientific data that is utilized by professional astronomers For each research area the book provides a concise explanation of the purpose and value of the amateurs observations a description of the equipment that is needed specific observing procedures complete data reduction instructions and an explanation of how and where to submit results so that they will be available to the professional users **Exploring the History of New Zealand Astronomy** Wayne Orchiston, 2015-12-08 Dr Orchiston is a foremost authority on the subject of New Zealand astronomy and here are the collected papers of his fruitful studies in this area including both those published many years ago and new material The papers herein review traditional Maori astronomy examine the appearance of nautical astronomy practiced by Cook and his astronomers on their various stopovers in New Zealand during their three voyages to the South Seas and also explore notable nineteenth century New Zealand observatories historically from significant telescopes now located in New Zealand to local and international observations made during the 1874 and 1882 transits of Venus and the nineteenth and twentieth century preoccupation of New Zealand amateur astronomers with comets and meteors New Zealand astronomy has a truly rich history extending from the Maori civilization in pre European times through to the years when explorers and

navigators discovered the region up to pioneering research on the newly emerging field of radio astronomy during WWII and in the immediate post war years A complete survey of a neglected but rich national astronomical history this does the subject full and comprehensive justice

The Observational Amateur Astronomer Patrick Moore,2012-12-06 Patrick Moore has pulled together a group of professional and amateur astronomers each an expert in a particular field to describe how to observe every category of object that is within reach of an astronomical telescope of modest size Each chapter deals with a different class of object covering the whole range of possibilities from the Moon planets and stars to more specialised observations of comets novae and meteors If you own or are thinking of buying an astronomical telescope here is the book that will help you get the most enjoyment out of it It also explains how best to use your telescope for proper scientific observations for astronomy is one of the few remaining areas of science where a lot of useful work can be carried out by non professionals A companion book *The Modern Amateur Astronomer* deals with the non observational aspects of astronomy from buying a telescope or making your own through electronic equipment and accessories to more technical aspects such as spectroscopy and astrophotography
