Time-limited Psychodynamic Psychotherapy with Children and Adolescents Ruth Schmidt Neven, 2016-08-12 At a time when there is increasing concern about the escalation of child and adolescent mental health problems Time limited Psychodynamic Psychotherapy with Children and Adolescents provides an innovative contextual model that engages the child

or young person and their parents The core of the model is the recognition of the dynamic capacity for growth in the child and how this in itself creates opportunities for effective treatment over a relatively short period of time Based on evidence that the most enduring therapeutic outcomes involve a shift in the parents relational understanding of themselves as well as a change in the child the book uses case examples to show how this model can be applied in everyday therapeutic practice Time limited Psychodynamic Psychotherapy with Children and Adolescents is aimed at practitioners in the field of child adolescent parent and family psychotherapy It will interest psychologists child psychotherapists doctors psychiatrists social workers and mental health workers *Contemporary Psychodynamic Psychotherapy for Children and Adolescents* Sergio V. Psychotherapy for Children (RFP-C) with Externalizing Behaviors Leon Hoffman, Timothy Rice, Tracy Prout, 2015-09-25 Manual of Regulation Focused Psychotherapy for Children RFP C with Externalizing Behaviors A Psychodynamic Approach offers a new short term psychotherapeutic approach to working dynamically with children who suffer from irritability oppositional defiance and disruptiveness RFP C enables clinicians to help by addressing and detailing how the child's externalizing behaviors have meaning which they can convey to the child Using clinical examples throughout Hoffman Rice and Prout demonstrate that in many dysregulated children RFP C can Achieve symptomatic improvement and developmental maturation as a result of gains in the ability to tolerate and metabolize painful emotions by addressing the crucial underlying emotional component Diminish the child's use of aggression as the main coping device by allowing painful emotions to be mastered more effectively Help to systematically address avoidance mechanisms talking to the child about how their disruptive behavior helps them avoid painful emotions Facilitate development of an awareness that painful emotions do not have to be so vigorously warded off allowing the child to reach this implicit awareness within the relationship with the clinician which can then be expanded to life situations at home and at school This handbook is the first to provide a manualized short term dynamic approach to the externalizing behaviors of childhood offering organizing framework and detailed descriptions of the processes involved in RFP C Supplying clinicians with a systematic individual psychotherapy as an alternative or complement to PMT CBT and psychotropic medication it also shifts focus away from simply helping parents

manage their children's misbehaviors. Significantly, the approach shows that clinical work with these children is compatible with understanding the children's brain functioning and posits that contemporary affect-oriented conceptualizations of defense mechanisms are theoretically similar to the neuroscience construct of implicit emotion regulation, promoting an interface between psychodynamics and contemporary academic psychiatry and psychology. *Manual of Regulation-Focused Psychotherapy for Children with Externalizing Behaviors: A Psychodynamic Approach* is a comprehensive tool capable of application at all levels of professional training, offering a new approach for psychoanalysts, child and adolescent counselors, psychotherapists, and mental health clinicians in fields including social work, psychology, and psychiatry.

Transference-focused Psychotherapy for Adolescents with Severe Personality Disorders (Lina Normandin, Karin Ensink, Alan Weiner (Psychologist), Otto F. Kernberg, 2021) is a manual for clinicians who wish to learn an effective psychodynamic treatment for young people with personality disorders (PDs). Despite converging evidence that PDs emerge in childhood and are clearly evident in adolescence, research on effective treatments has been limited. The editors have therefore created a book that details treatment models with strong theoretical foundations and examines systematic interventions designed to explore and resolve the conflicts and behaviors common to PDs that impede normal adolescent development. The book begins with an overview of psychopathology and normal adolescent development from a psychodynamic perspective. The next section offers therapeutic approaches, including a discussion of the major goals and strategies of TFP-A, the clinical evaluation and assessment process, establishment of the treatment framework and collaboration with parents, and finally the techniques and tactics of TFP-A. The last section of the book reviews the phases of treatment and discusses the strengths and competencies a therapist must have to successfully conduct transference-based therapy. Authored by experts in the field, including Dr. Kernberg, a pioneer in object relations, *Transference-Focused Psychotherapy for Adolescents with Severe Personality Disorders* teaches clinicians how to conduct TFP-A with the ultimate goal of resolving the intrapsychic restrictions that interfere with normal adolescent development.

The Clinical Psychiatry of Adolescence (Derek Steinberg, 1983) is a volume in the *Adolescent Psychiatry* series, Volume 20, edited by Sherman C. Feinstein.
