A Practical Guide To Splines:

A Practical Guide to Splines Carl De Boor,1978 This book is based on the author s experience with calculations involving polynomial splines presenting those parts of the theory especially useful in calculations and stressing the representation of splines as weighted sums of B splines The B spline theory is developed directly from the recurrence relations without recourse to divided differences This reprint includes redrawn figures and most formal statements are accompanied by proofs

Theory and Practice of Geometric Modeling Wolfgang Straßer, Hans-Peter Seidel, 2012-12-06
 This book is a result of the lectures and discussions during the conference Theory and Practice of Geometric Modeling. The event has been organized by the Wilhelm Schickard Institut für Informatik Universität Tübingen and took place at the Heinrich Fabri Institut in Blaubeuren from October 3 to 7 1988. The conference brought together leading experts from academic and industrial research institutions, CAD system developers and experienced users to exchange their ideas and to discuss new concepts and future directions in geometric modeling. The main intention has been to bridge the gap between theoretical results, performance of existing CAD systems and the real problems of users. The contents is structured in five parts: A Algorithmic Aspects, B Surface Intersection Blending Ray Tracing, C Geometric Tools, D Different Representation Schemes in Solid Modeling, E Product Modeling in High Level Specifications. The material presented in this book reflects the current state of the art in geometric modeling and should therefore be of interest not only to university and industry researchers but also to system developers and practitioners who wish to keep up to date on recent advances and new concepts in this rapidly expanding field. The editors express their sincere appreciation to the contributing authors and to the members of the program committee: W Boehm, J Hoschek, A Massabo, H Nowacki, M Pratt, J Rossignac, T Sederberg and W Tiller for their close cooperation and their time and effort that made the conference and this book a success.

Modeling Time-Varying Unconditional Variance by Means of a Free-Knot Spline-GARCH Model Oliver Old, 2022-07-27
 The book addresses the problem of a time-varying unconditional variance of return processes utilizing a spline function. The knots of the spline functions are estimated as free parameters within a joint estimation process together with the parameters of the mean, the conditional variance and the spline function. With the help of this method, the knots are placed in regions where the unconditional variance is not smooth. The results are tested within an extensive simulation study and an empirical study employing the S P500 index.

Knot Insertion and Deletion Algorithms for B-Spline Curves and Surfaces Ronald N. Goldman, Tom Lyche, 1993-01-01
 New approaches in knot insertion and deletion to understanding analyzing and rendering B-spline curves and surfaces.
