*The Emergence of Ontological Styles of Thinking in Ancient Greece* Duncan F. Kennedy, 2025-11-21 This book presents an innovative theoretical framework for exploring the intellectual culture of ancient Greece in the period 450 350 BC The bewildering questions and surprising opportunities posed by emergent styles of ontological thinking at this time about issues of being and becoming of presence what is or is not there for us and about different modes of existence moulded the divergent responses of figures such as Herodotus and Thucydides Parmenides Protagoras and Democritus as well as cultural practices such as tragedy and the fiercely abstract thinking of the early Greek geometers and mathematicians Many new ways of seeing were being created and with them new objects and modes of inquiry Taking its cue from the historical ontological turn in the humanities as seen in the work of amongst others Tristan Garcia Ian Hacking and Bruno Latour it challenges existing narratives of the development of Greek thought that continue to reflect the metaphysical agenda created by Plato and Aristotle in the fourth century BC responses those earlier thinkers could not have foreseen and which can frequently be shown to be highly tendentious Their texts are instead located in contemporary fields of sense that draw attention to details that suggest

different lines of development the traces of which can be detected even in receptions that are hostile Dynamically linking ancient and modern thought the book is accessible to a broad readership interested in how disciplines now taken for granted including history philosophy anthropology and mathematics first emerged as distinct styles of inquiry *Web Information Systems -- WISE 2004* Xiaofang Zhou, Stanley Su, Mike P.
